## **1.0 Introduction**

This report documents the work of a four person mineral exploration crew on the Windfall 2 Project (the property) carried out from the 15th of July, 2011 to the 18th of July, 2011.

### **1.1 Location and Access**

The property is located in west central British Columbia 244 kilometres west of Prince George and 70 km south southwest of Burns Lake (Fig. 1). Access from Burns Lake is south by paved BC Highway 35 for 70 km. to Ootsa Lake then 35 km. southeast along the north shore of Ootsa Lake by well maintained logging mainlines to a barge landing on Tahtsa Reach. This barge landing can also be accessed by driving 120 km. west southwest from Vanderhoof on well maintained logging mainlines. The barge is presently owned by Butch McMaster Ph: 250-699-8014. Transportation across Ootsa Lake can be arranged through Mr. McMaster.

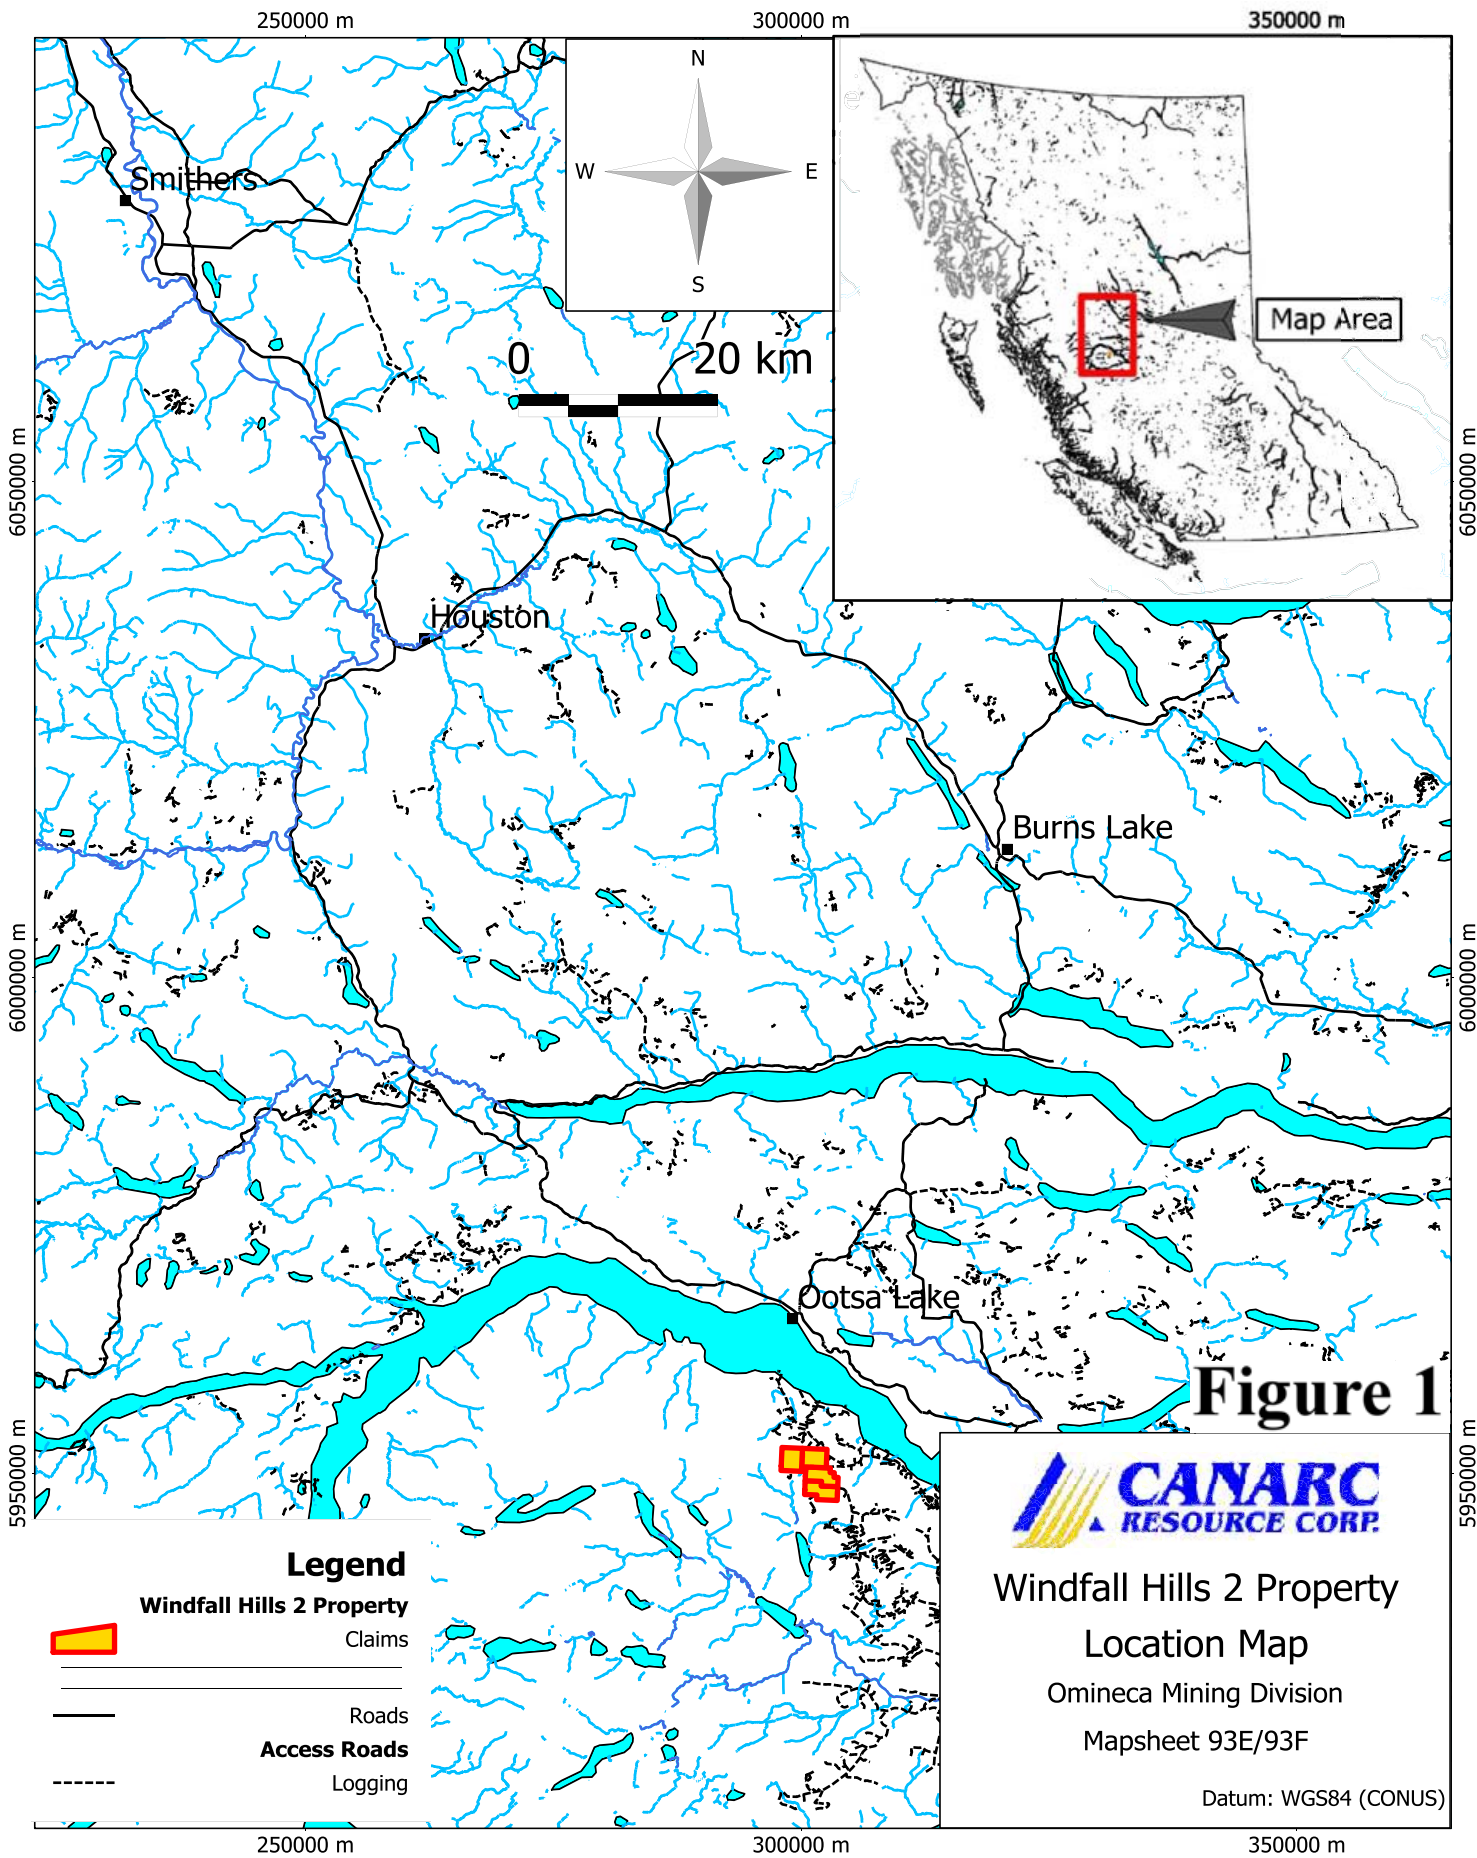

From the south shore barge landing proceed 20 km. west northwest along the south shore of Ootsa Lake to the Chief Main Road. This logging mainline proceeds south crossing the north east corner of the property and skirting the east side of the property(Fig. 2). Eight logging spur roads extend west and southwest off of the Chief Main onto the property providing good access to most of the property.

### **1.2 Physiography and Climate**

The property covers an area of the Nechako Plateau with subdued topography. Elevation ranges from 1,140 metres at Loon Lake on the eastern edge of the property to 1,250 metres in the north-central part of the property. Landforms are affected by a strong glacial movement to the northeast. Over 99% of the property is covered by glacial till that ranges from less than one metre thick to tens of metres thick with an average cover of less than two metres. Outcrop is only present on the southwest facing slopes of prominent knobs on the property, all of which are rhyolite volcanic centres, and in ditches and borrow pits from logging road construction.

The Biogeoclimatic Ecological Zone is Sub-Boreal Pine Spruce. The property area covers mature stands of spruce and pine. Approximately 30% of the property has been clear cut. Greater than 80% of the remaining mature pine is standing dead from pine beetle infestation.

The climate is northern interior with long cold winters starting in November and lasting until mid to late April. Precipitation is light in winter with snowfalls of 0.7 to 1.5 metres. Summers are relatively wet with rainfall often exceeding 10 cm per month.

### 1.3 Property Status and Ownership

The property covers 1916.1 ha in 4 claims. Canarc Resource Corp.(Canarc) is the registered owner of these claims. Claim details are shown in Table 1 below.

**Table 1**                      **Claims, Ownership and Status**

<b>Tenure #</b>	<b>Claim Name</b>	<b>Owner</b>	<b>Good to Date</b>	<b>Area (ha.)</b>
866093	Uduk 7	Canarc	13/7/13	479.22
866095	Uduk 8	Canarc	13/7/13	479.07
866096	Uduk 9	Canarc	13/7/13	478.88
866097	Uduk 10	Canarc	13/7/13	478.90
			<b>Total</b>	1916.1

### 1.4 Exploration Targets and History

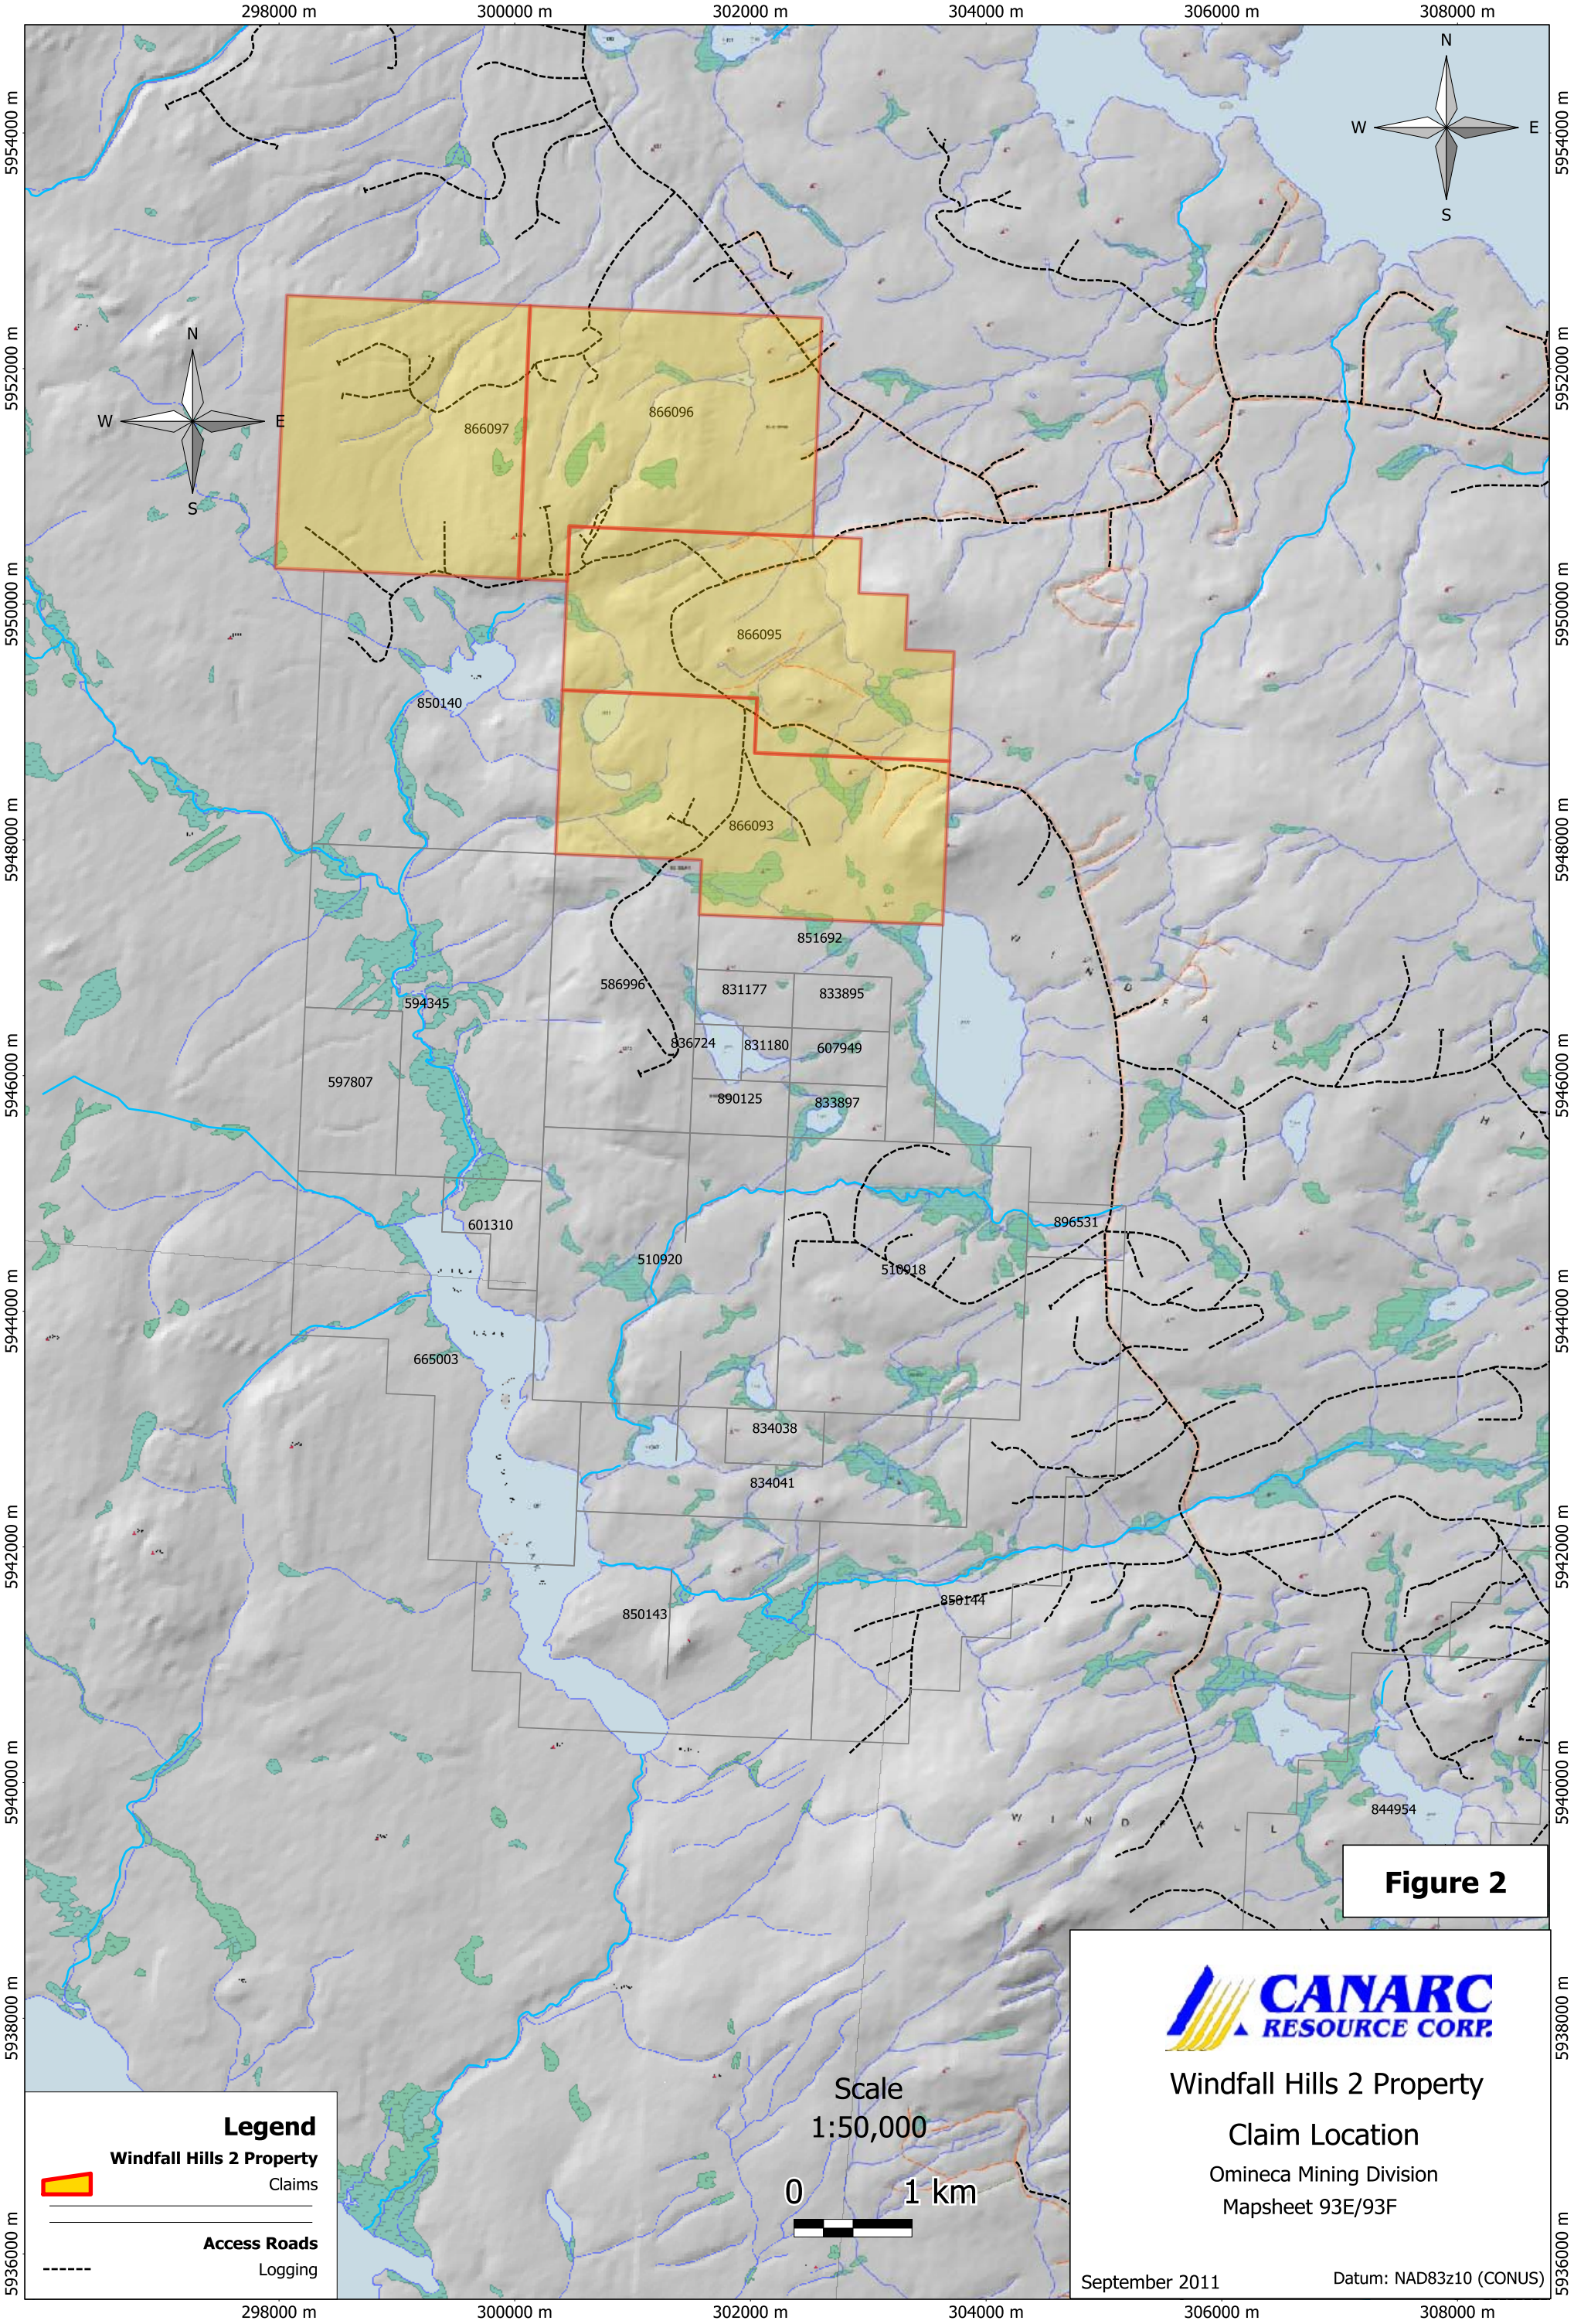

The main mineral exploration targets on the property are disseminated gold ore bodies associated with Cretaceous to Tertiary rhyolite volcanic centres, similar to the Round Mountain deposit in Nevada or, closer to home, the Blackwater/Davidson Property being developed by New Gold approximately 100 km. southeast of the property. These deposits are low sulphidation epithermal gold deposits characterized by near surface low temperature, low pressure deposition of gold associated with multiple periods of silicification, minor pyrite and pervasive argillic alteration.

The following descriptions of historic work refers to work carried out mainly on the adjoining claims southwest of the property. Most of the work described covered part of the Windfall Hills 2 Property.

Part of the area of the property was originally staked in 1981 by Amax Exploration Ltd. who carried out reconnaissance mapping and sampling but allowed their claims to lapse. In 1984 the property area was restaked by S. Travis.

Asitka Resource Corporation optioned part of the property and conducted rock and soil geochemical sampling in 1985 and 78 metres of Winkie drilling in three holes in 1986 on the adjoining property to the southwest. Values ranged from 20 to 1450 ppb gold in quartz stringer stockwork zones intersected in drill holes.

Logging

Scale  
 1:50,000

0 1 km

Pacific Comox Resources Ltd. optioned the property from Travis in 1987 and, in 1988, sub-optioned to Chalice Mining Inc. Chalice conducted a program of line cutting, geological and geochemical surveys, an Induced Polarization geophysical survey and 358 metres of diamond drilling in five holes on the adjoining property to the southwest. Chalice did not exercise their option and the property reverted to Pacific Comox.

Pioneer Metals Corp. optioned the property in 1993 and carried out a soil geochemical program that year followed by further geochemical sampling, geological mapping and six mechanized trenches in 1994 on the adjoining property to the southwest. All six trenches returned values greater than 0.1 g/t gold with the whole 42 metres of TR-94-4 averaging 0.41 g/t gold including six metres of 1.4 g/t gold. Pioneer terminated its option in 1996.

In 1997 Atna Resource Ltd. purchased the property from Pacific Comox and optioned 60% of the property to Gold Mountain Resources Ltd. Atna carried out a soil geochemical survey, geological mapping and an Induced Polarization geophysical survey in 1997.

No significant work has been reported on the property since 1997.

### **1.5 2011 Program**

A program of prospecting and rock sampling was carried out to define areas with anomalous gold content.

All logging roads were prospected for new outcrop. Extensive chip sampling was carried out in a quarry on the Uduk 8 claim where highly altered rhyolite is exposed. Eighteen rock samples, were taken (Map 1).

### **2.0 2011 Prospecting Program**

The 2011 prospecting program was designed to explore the claim block and prospect all new logging roads. Limited outcrop in the area make logging roads and borrow pits the best places to find outcrop. Where ever exposed bedrock or subcrop was altered or mineralized it was sampled.

Very little outcrop was seen in prospecting traverses. Many samples were taken of subcrop from the roots of overturned trees. Generally, the southwest slopes of prominent knobs have some outcrop. Sample locations and descriptions are included in Appendix C, sample preparations and analytical procedures are described in Appendix D and sample locations are shown on Map 1.

### **3.0 Conclusions**

Historic trenching, soil geochemical sampling and Induced Polarization geophysical surveys in 1988 and 1997 have provided sufficient information to conclude that adjacent Windfall property hosts a gold bearing low sulphidation, epithermal system, similar to the Blackwater Davidson project being developed by New Gold and to Round Mtn. in Nevada. The adjoining Windfall 2 property, the subject of this report, has good potential to host a similar deposit.

The property has very little outcrop. Geological mapping or prospecting are of limited value. Some subcrop samples can be obtained from the roots of overturned trees. Mechanized trenching would be effective in approximately 30% of the property.

The most effective way to further test this property is by carrying out detailed prospecting traverses and geochemical surveys, followed by mechanized trenching and drilling.

### **4.0 Recommendations**

A ten day prospecting program followed by a 2,000 sample soil geochemical survey over the more prospective areas should be carried out.

This program is estimated to cost \$80,000 and take one month to complete.

Respectfully Submitted,

David St. Clair Dunn, P.Geo.

James Moors, P.Geo

## **Appendix B**

### **Authors' Statements of Qualifications**

I, **David St. Clair Dunn**, Professional Geoscientist, with a business address of 331 East 8th Street, North Vancouver, B.C., Canada, certify that:

1. I am a graduate of the University of British Columbia, Vancouver, B.C. and hold a degree of Bachelor of Science in Geology.
2. I have practiced my profession as a prospector and geologist for 42 years.
3. I am registered as a Professional Geoscientist with the Association of Professional Engineers and Geoscientists of the Province of British Columbia (Reg. # 18,479). I am a Fellow of the Geological Association of Canada and of the Association of Applied Geochemists, a member of the Canadian Institute of Mining, Metallurgy and Petroleum, the Education Committee of the Association for Mineral Exploration B.C., the Society of Economic Geologists and the Mining Exploration Group. I co-authored the Assessment Report "Report on 2011 Prospecting Program on the Windfall Hills 2 Property" and supervised the work described in the report.
4. I worked on the Windfall Hills 2 Property, which is the subject of the Report, between the 6<sup>th</sup> of July to the 19th of July, 2011. I have had mineral exploration experience on many other gold deposits including the Ericson mine, the Mitchell-Sulphurets properties, the Silback Premier Mine, Bralorne Mine, the Sheep Creek camp, Uduk Lake property and Puffy Lake Gold Mine in Canada. Outside of Canada I have worked on approximately 20 mainly epithermal gold deposits in six states of Mexico, Nicaragua, Cuba and Sumatra, Indonesia.
5. I co-authored the Report with James G. Moors, P.Ge., an officer of Canarc Resource Corp. I wrote parts of the text of the Report and edited and supervised the preparation of the complete Report. I take responsibility for the accuracy and substance of the whole of the report.
6. I am not aware of any material fact or material change from the information in this Report that would make the Report misleading. As of the date of the certificate, to the best of the qualified person's knowledge, information and belief, the technical information that is required to be disclosed to make the Report not misleading has been disclosed.
7. I consent to the use of this Report for the purpose of a private or public financing.
8. I am independent of the issuer applying all tests set out in Section 1.4 of NI 43-101. I supervised work programs on this property for Pioneer Metals Corp. in 1993 and 1994. I own part of the property as described in this report.

Signed:

David St. Clair Dunn, P.Ge.

November 1, 2011

I, **James G. Moors** do hereby by certify that:

1. I am currently employed as Vice President, Exploration by:

Canarc Resource Corp.  
Suite 301-700 West Pender Street  
Vancouver, BC  
V6C 1G8

2. I graduated with a B.Sc. Hons degree in Earth Science from the University of Waterloo in 1989.
3. I am a member in good standing of the Association of Professional Engineers and Geoscientists of British Columbia (No. 25807)
4. I am Past President of the Canadian Council of Professional Geoscientists.
5. I have practiced my profession continuously for over 20 years and have examined and reported on numerous precious metal deposits throughout the world including northern British Columbia.
6. I am Co-Author of this report titled "Report on 2011 Prospecting Program on the Windfall Hills 2 Property Uduk 7-10".
7. As of the date of this certificate, to the best of the writer's knowledge, information and belief, this Technical Report contains all scientific and technical information that is required to be disclosed to make the Technical Report not misleading.

Dated this 1<sup>st</sup> day of November, 2011.

---

James G. Moors, P.Geo.
