SILVER LAKE PROPERTY

ROCK GEOCHEMISTRY REPORT

Craig Kennedy

November 2011

1.00 INTRODUCTION

1.10 Location and Access

The property is approximately 55 km south south-east of the town of Burns Lake in Central BC, map sheet 93F.084, UTM Coordinates 353000E – 5972000N. Access is provided by good main and branch logging roads. Topography is moderate to gentle with a thick cover of spruce, balsam forest and dead lodgepole pine. Wildfires and recent forest harvesting dominate the landscape.

1.20 Property

The Silver Lake property is made up of tenures 712182, 851892 and 851893. The claims are owned by Dedra Critchlow of Kaslo BC. Work on the claims was paid for by Kootenay Gold Inc, Suite 960 1055 W Hastings St, Vancouver BC, V6E 2E9

1.30 History of Previous Exploration

The area has seen moderate to heavy grassroots exploration since the mid 1960's. Target types sought have mostly been Mo/Cu porphyry and epithermal Ag/Au types. Local assessment reports 13969 and 11519 provide general exploration information for the area.

2.00 ROCK GEOCHEMISTRY

Initial exploration work has targeted a large alteration system which is associated with Mesozoic-tertiary sediments, felsic and mafic volcanics. Government mapping indicates an anomalous package of vesicled mafic volcanics in the area of two small sloughs near the mid southern boundary of the Property. The area of vesicled mafic volcanics is cut by fracture zones which are brecciated. The narrow breccias zones trend northwest to northeast and are cemented by quartz and calcite. Volcanic vugs host quartz crystals, opal, chalcedony, calcite, barite and zeolite with some vugs hosting amethyst quartz.

North of the two sloughs a wide continues zone of felsic tuff, flow banded rhyolite and porphyry strikes northeast. This zone is cut by a fracture system again trending both northeast and northwest. Micro veining and brecciation can be quite common in some areas with silica vugs and grey to white veins. Pods hosting more intense silicification with green-grey areas hosting fine fresh pyrite are occasionally noted. This type of alteration and structure is quite often seen in the Nechako and seems to indicate proximity to a potentially important structure. In most cases the rock samples are devoid of anomalous gold until zones of intense silica alteration are encountered. It is speculated that structural traps, intersections or other features control the emplacement of more intense silica alteration. The key however might be to persist along alteration systems hosting seemingly inert geochemical samples. As mentioned above most rock samples have no anomalous gold what so ever. Low anomalous values for gold may very well indicate "close by" highly anomalous or ore grade gold values. When 0.1 gram or better gold is encountered it is commonly associated with anomalous Mo, Ag, Sb, As, Ba and Hg. Structures with brecciation, vugs, pyrite, limonite, hematite, calcite and quartz veining along with geochemical anomalous Mo, Sb, As, Ba, Hg and Ag become potentially important targets.

3.00 CONCLUSION

Prospecting and rock geochemistry on the Silver Lake Property have led to the discovery of a large structurally controlled alteration zone. Sampling of rock on the original Silver Lake claim group resulted in the staking of more ground. Though only weak values for gold were obtained the wide spread alteration and geochemical values for pathfinders is very encouraging. It will be important to develop an exploration technique which allows for effective tracing of the structure.

4.00 STATEMENT OF EXPENDITURES

Rock Geochemistry Program The Silver Lake Property

Work performed: Summer 2011

Prospecting Contractors:

Craig Kennedy - 7 days @ 500/day (Includes 4x4 vehicle)	\$ 3500.00
Mike Kennedy - 3 days @ 350/day	1050.00
Tom Kennedy - 3 days @ 350/day	1050.00
Sara Kennedy - 7 days @ 200/day	1400.00
Acme Labs – 70 rock samples (incl. freight)	2024.00
Craig Kennedy - report preparation and writing Misc supplies & mapping	<u>1000.00</u>
Total:	<u>\$10,024.00</u>

5.00 AUTHOR'S QUALIFICATIONS

As the author of this report I, Craig Kennedy, certify that:

1. I am an independent prospector residing at 2290 Dewolfe Avenue, Kimberley, BC.
2. I have been actively prospecting in the East and West Kootenays district of BC for the past 32 years and have made my living prospecting for the past 23 years.
3. I have been employed as a professional prospector by major and junior mineral exploration companies.
4. I own and maintain mineral claims in BC and have optioned numerous claims to various exploration companies.
