## **INTRODUCTION & SUMMARY**

In 2005, D.K. Bragg started to acquire claims within the Hogem Batholith to the north of the Lorraine copper-gold deposit with the DK 1-3 Claims. Since then, many more claims have been acquired, i.e., the OS and DKSYN Claims. Since August 2010, four more claims were acquired so that the DKSYN Claims are now contiguous with the DK 1-3 Claims. Since then, even more claims have been acquired to add to the package.

Preliminary cursory prospecting of the extensive road area of the Osilinka River and the HaHa Creek area suggested that the Duckling Creek Complex (DCC) existed well beyond that mapped by Harlan Meade while doing his thesis (1975). Most of the known showings, Lorraine, et al, are within the DCC.

The current investigation was centred on the north side of the Osilinka River to the west of the work that was done during the period October 16 to 20, 2010 when it was recognized that the DCC existed in this area. This work was done on DKSYN 13, Tenure No. 729782, DKSYN 15 Tenure No. 729322, and DKSYN 17 Tenure No. 729842.

## **LOCATION & ACCESSIBILITY**

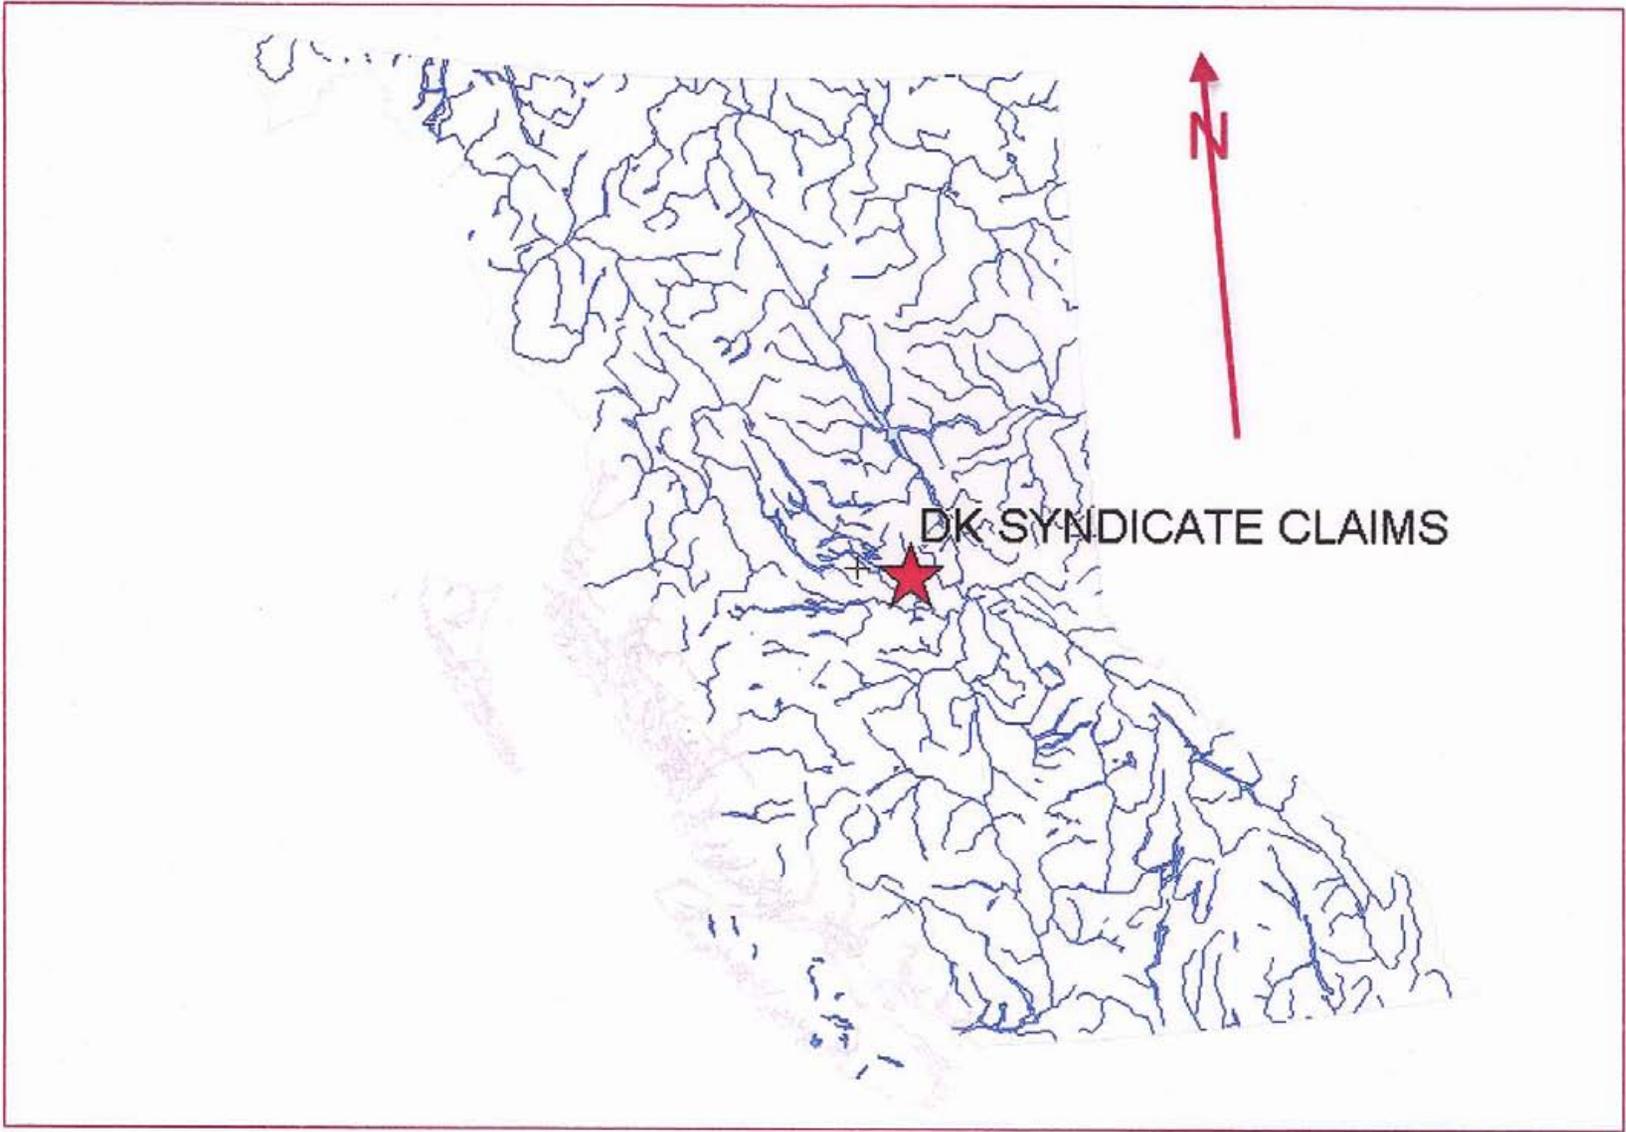

DKSYN Claims 13, 15 and 17 Claims are roughly 285 road kilometres from MacKenzie via the Northgate haul road to the Osilinka Camp; thence south by Usilka Lake to one kilometre of Osilinka Bridge Three where the Osilinka Main Line starts; thence west and northwest to Osilinka Bridge Four, and onto the road system on the north side of West Osilinka River westerly. Most of the way is via the well-maintained Northgate haul road. However, from Osilinka Camp to Osilinka Bridge Four and beyond, the road is not maintained and can be very rough in places.

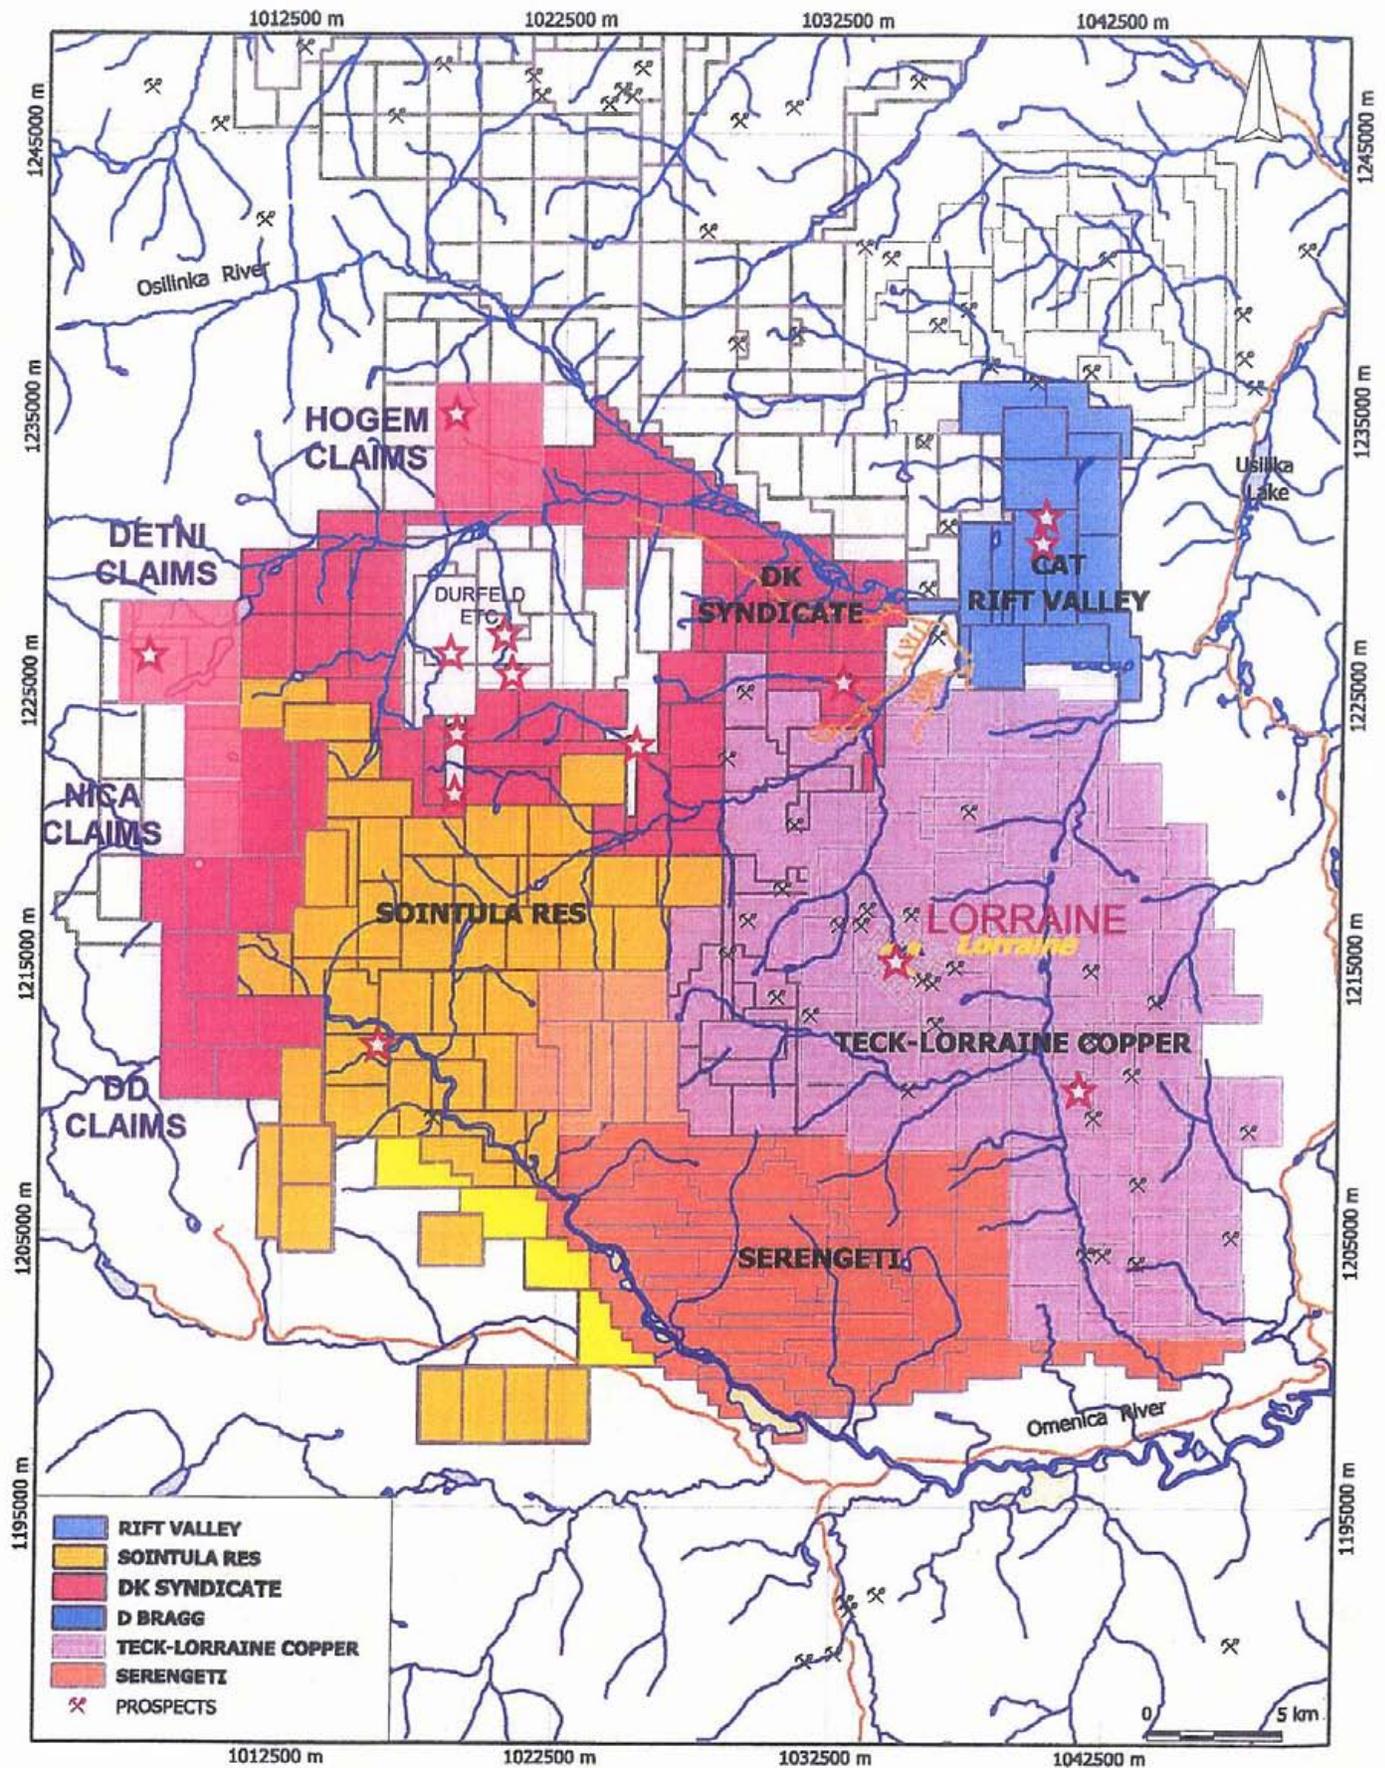

## GEOLOGY

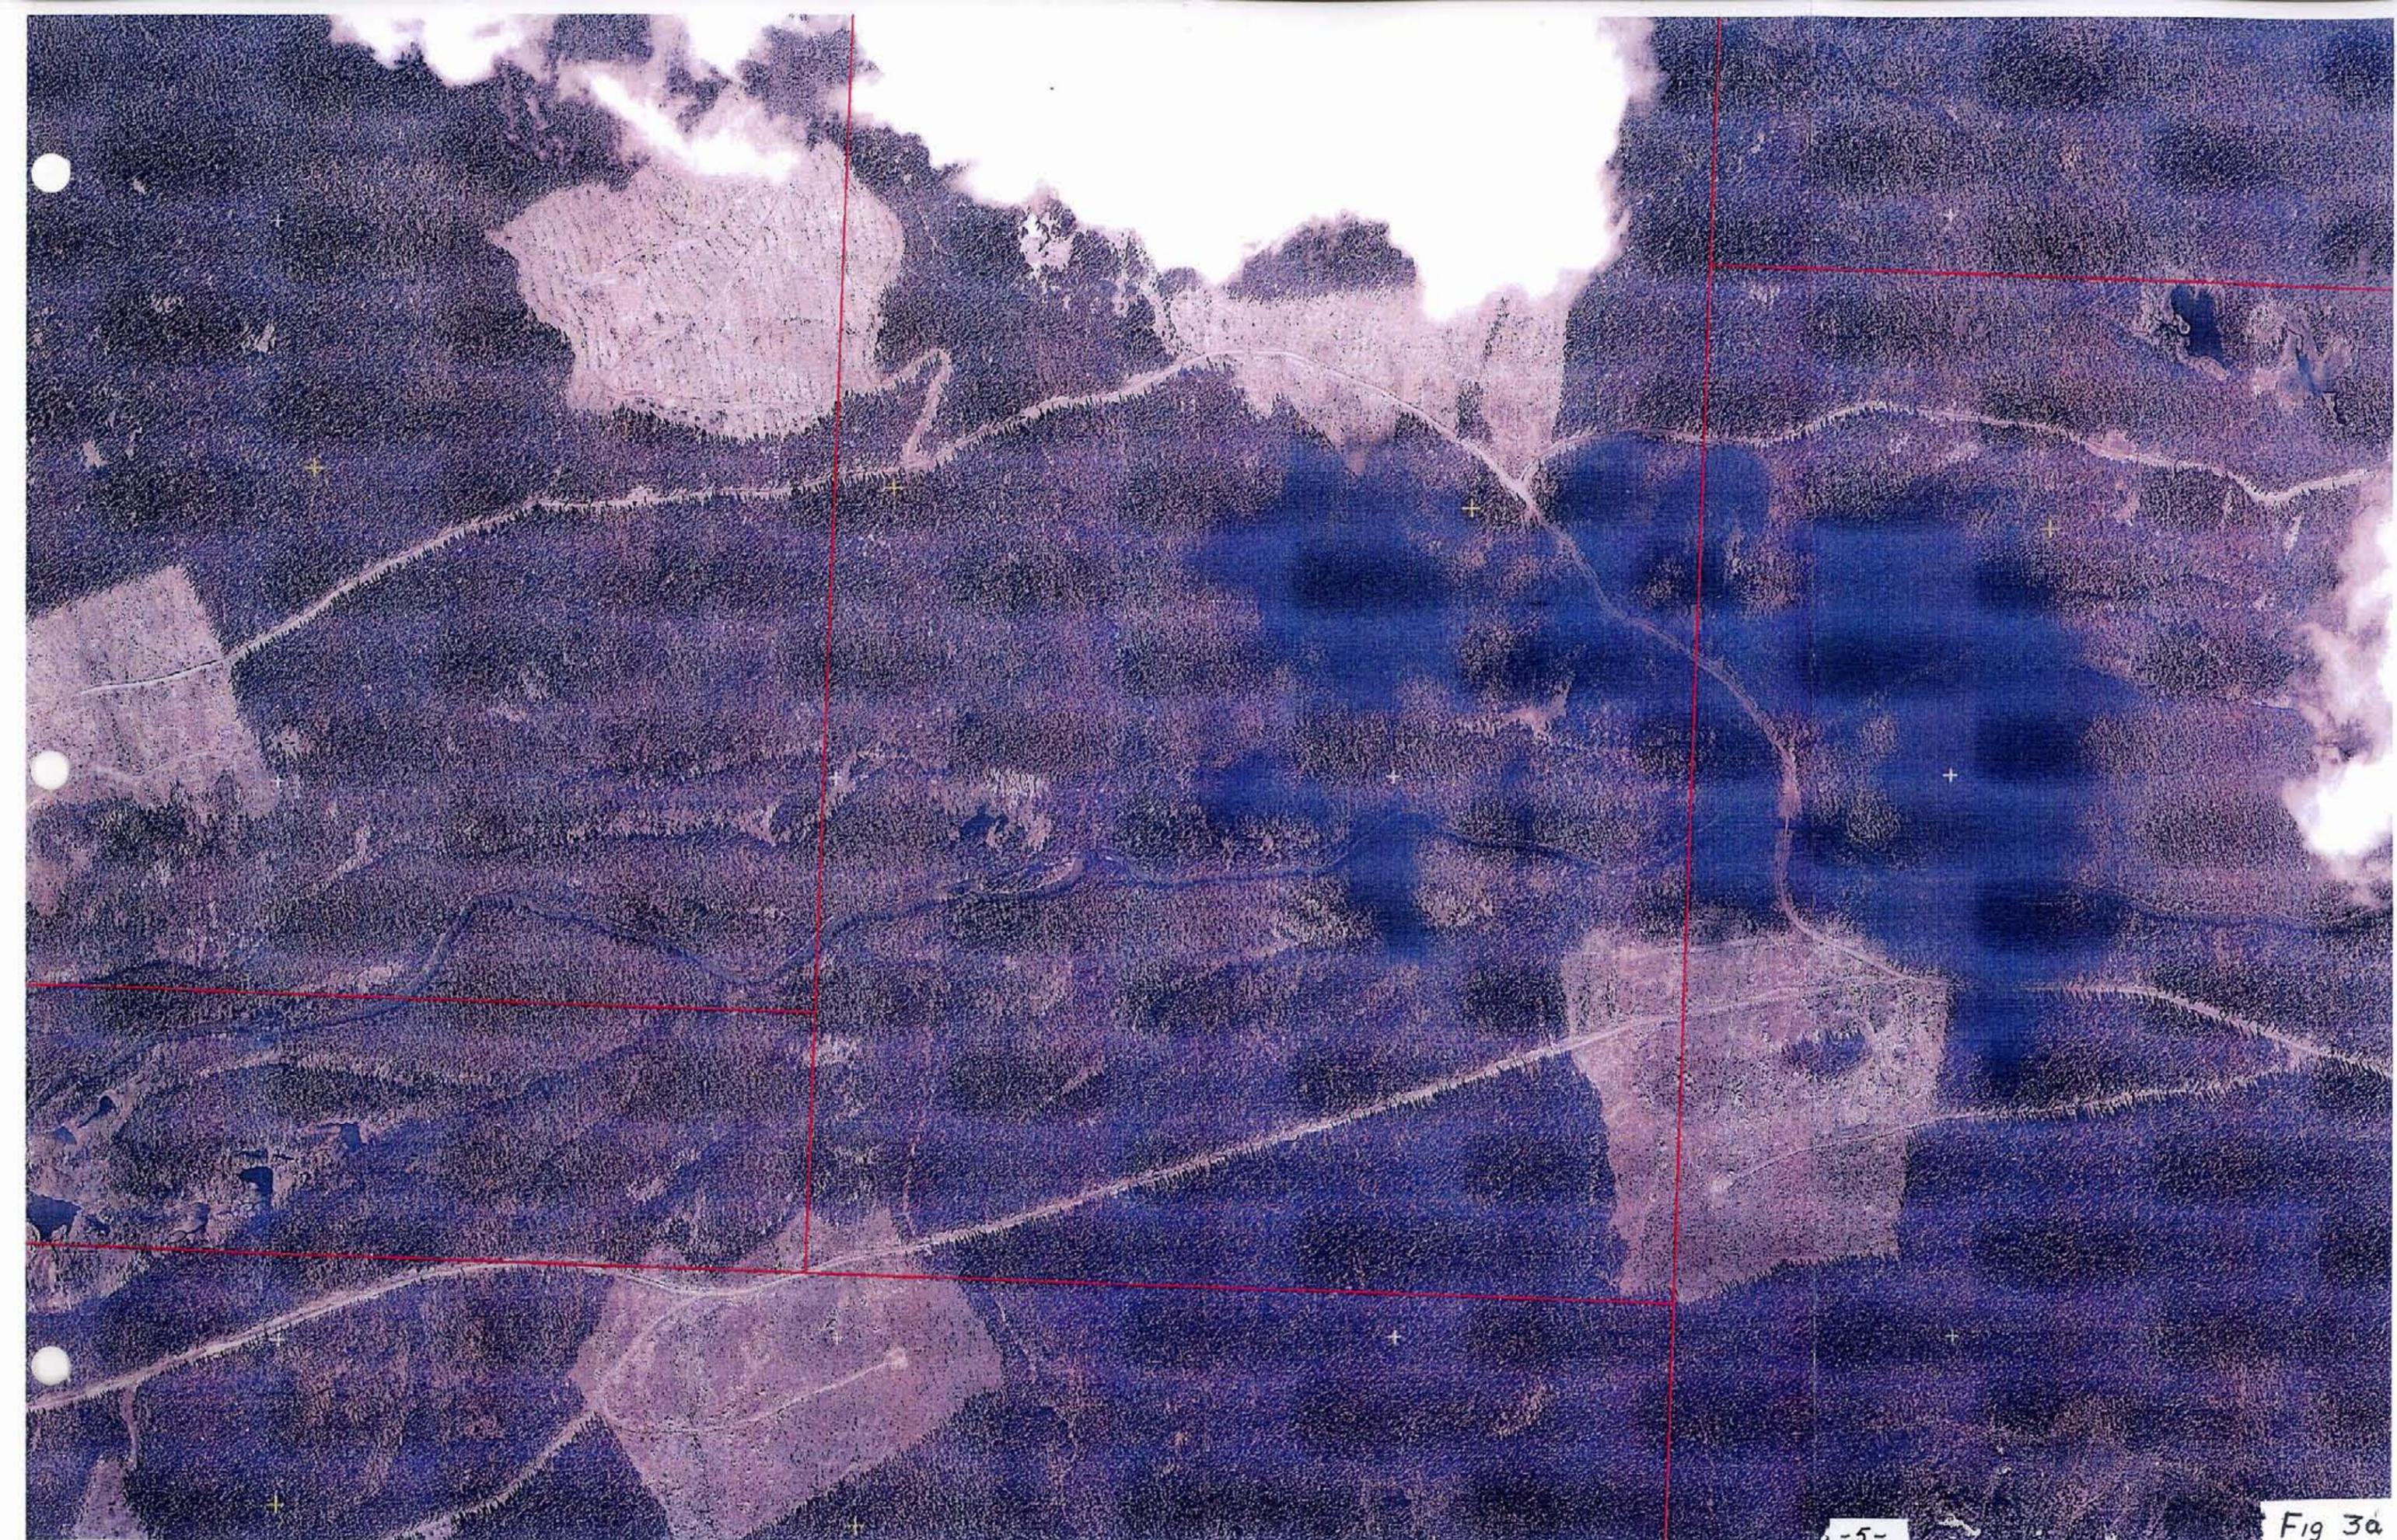

The geology of the Hogem Batholith and, in particular, the deposits of the Lorraine and many other showings in the area, i.e., Slide, Tam, Boundary, etc., have been well described by H.D. Meade, G.L. Barnet, D.K. Mustard, Peter Fox, B.J. Price, and many others. (See References and Bibliography) (See also Fig. 6 Geology of the Hogan Batholith and surrounding area by H.D. Meade) (See also Fig. 4 Regional Geology)

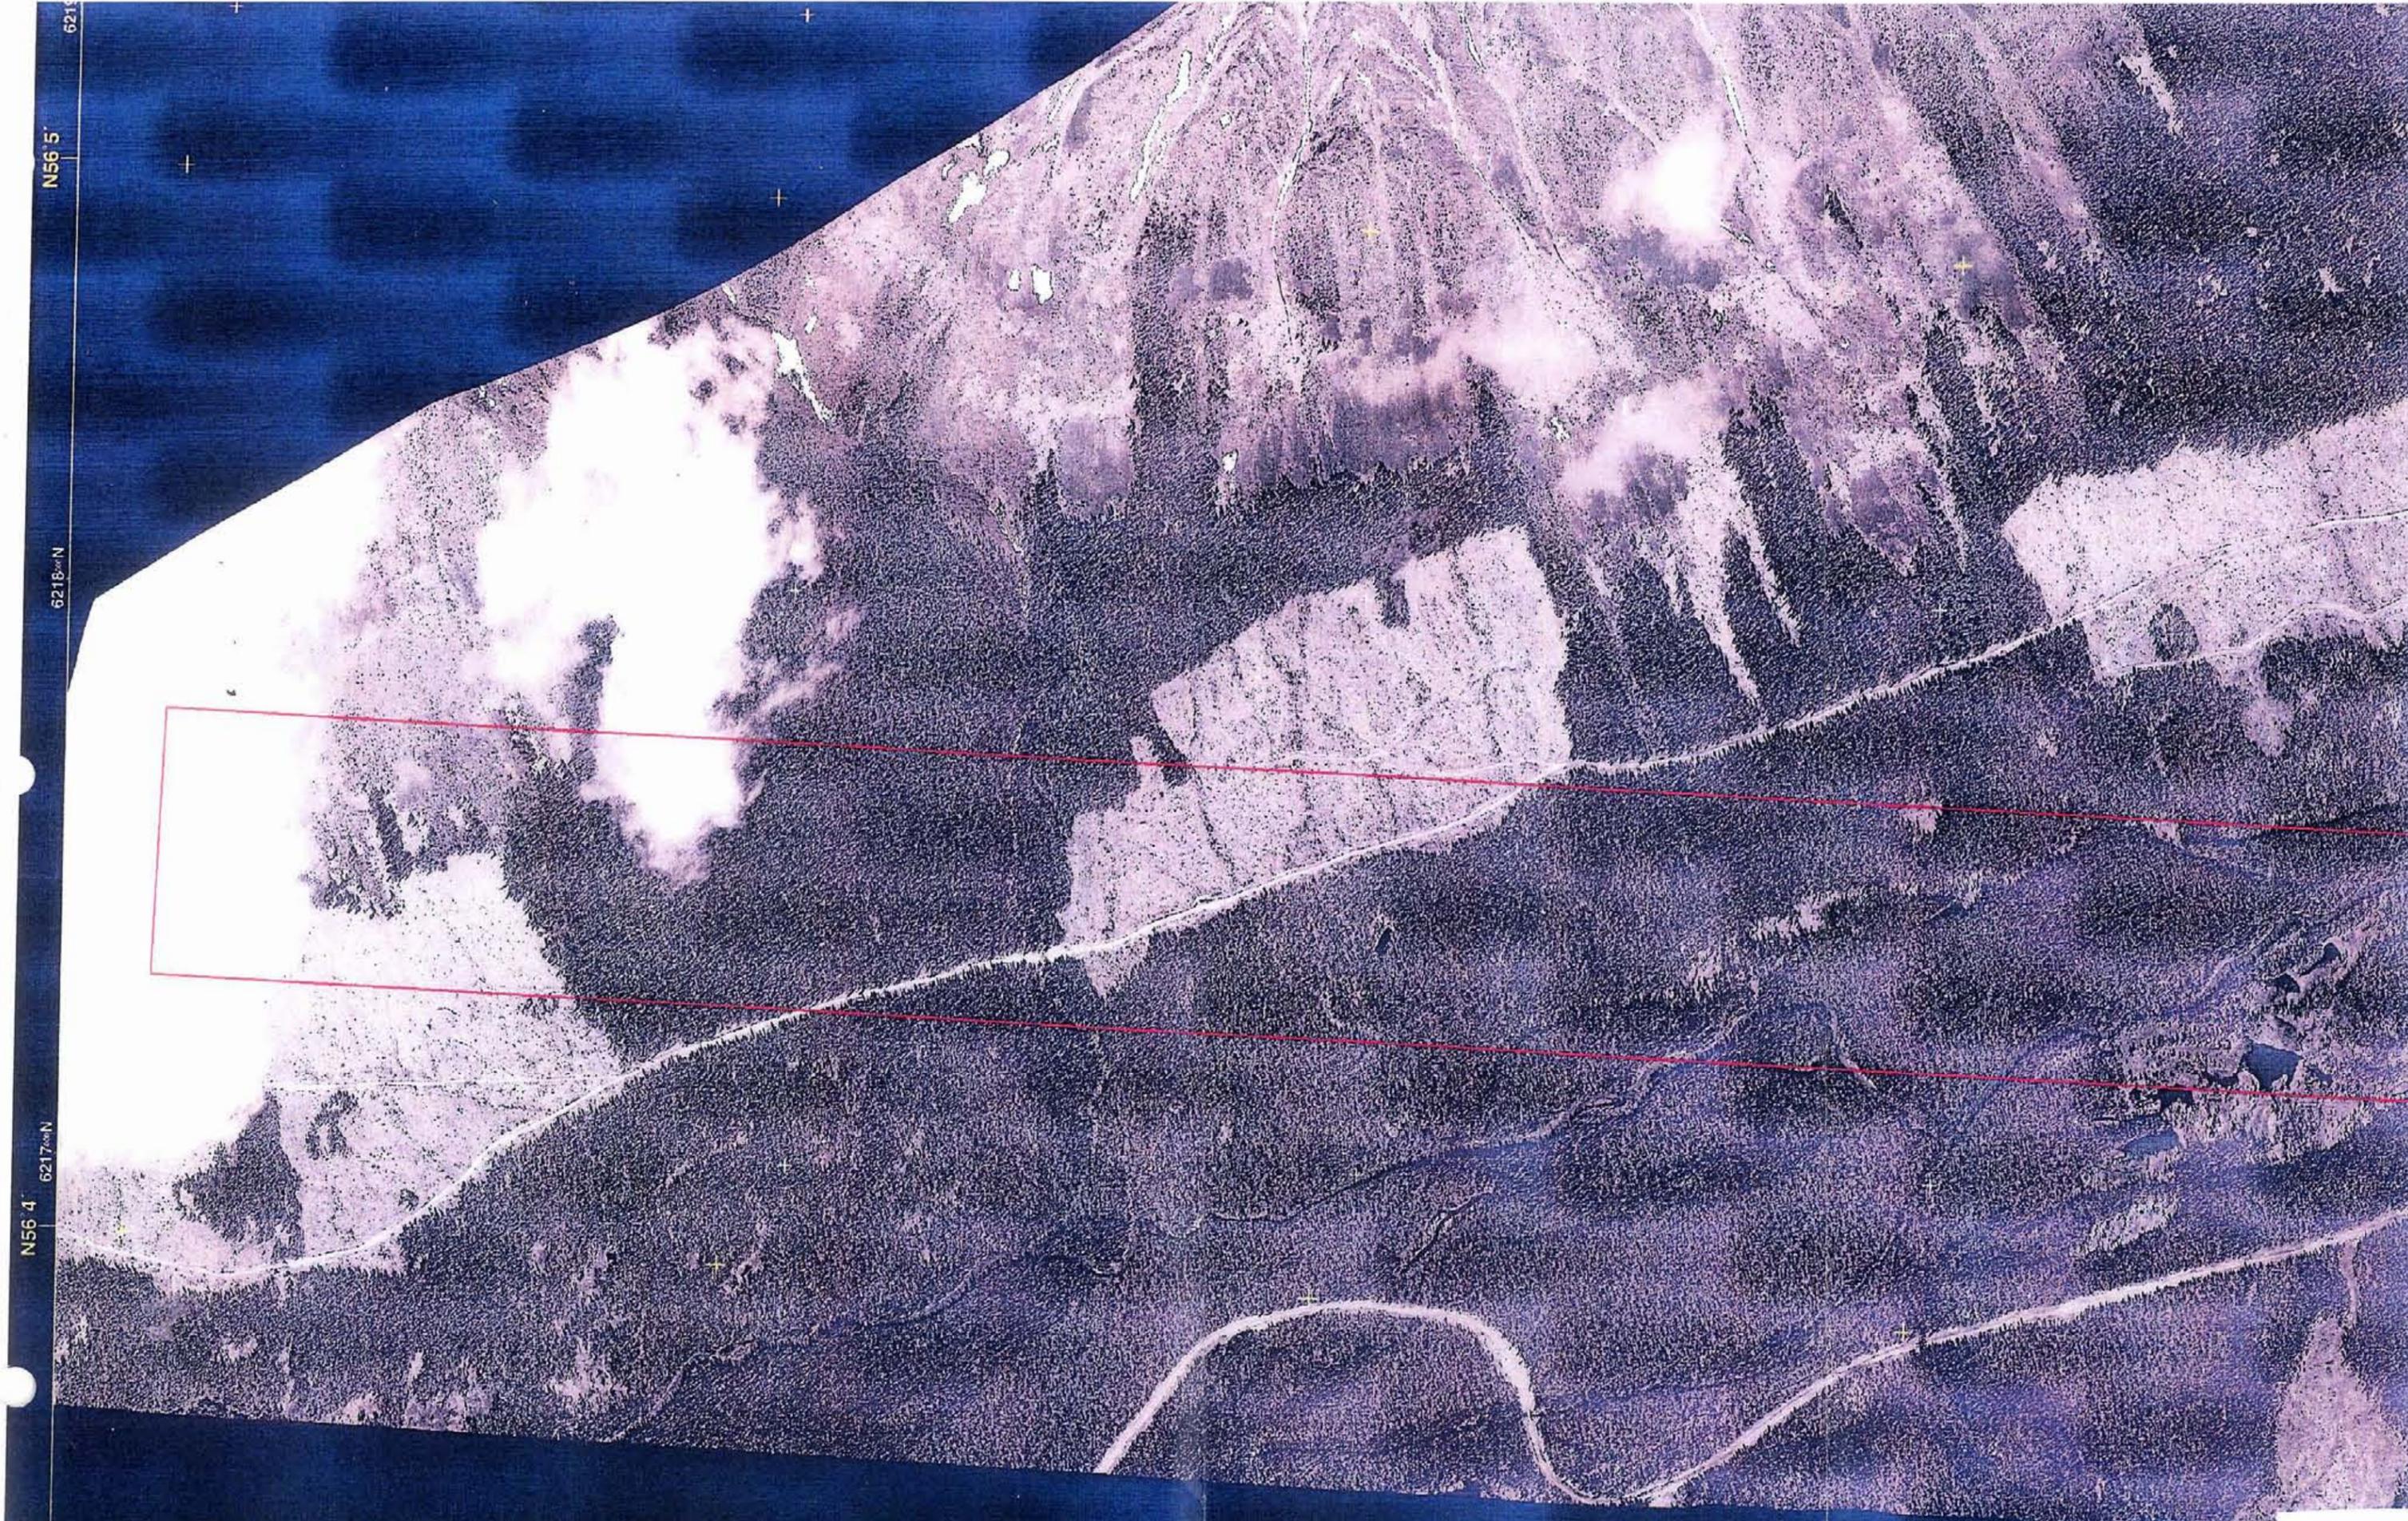

The Lorraine Deposit and most of the other showings occur within the Duckling Creek Complex. Much of the DCC was mapped by Meade but it was recognized that some of the complex was missed. (See Fig. 6 DCC mapped by Meade). Much of the DCC is highly magnetic and is outlined by the regional magnetics. (See Fig. 5 Regional Magnetics)

The DCC is a very complex set of rocks varying from monzonite and syenite including megacrystic syenite to proxinite with a host of intermediate phases. The complex is not well understood and has also been referred to as migmatite, metasomatite and tenite.

## **FIELD WORK & REPORT PREPARATION**

On September 8 and between October 3 and 13, 2011, a total of 73 hours were spent on mapping and prospecting the DKSYN Claims north of the West Osilinka River while working out of the Cat Mountain Camp.

The immediate area roads were mapped along with the topographical features, streams, outcrops, etc., using a Garmin GPS Map 60CS.

During this mapping program, 14 silt samples, six seep samples, one moss mat sample, and one soil sample were collected for analysis.

Geological mapping continued to outline areas of the DCC including syenite, megacrystic rocks and pyroxenite that had not been mapped previously (see Fig. 7 and Fig. 9a and 9b). The DCC outlined on Fig. 7 is based on outcrops, but float by glacial distribution suggests that the DCC may be even more widespread. More detailed mapping and prospecting is required.

Again a number of rock samples were collected to try to illustrate the different rock phases of the DCC from the syenite through the megacrystic phase to the pyroxenite. The best of the rocks selected from last year and this year were photographed and described. These are illustrated in Fig. 8a to 8i.

## DCC SUITE OF ROCKS

- 9a Coarse-grained syenite (9c); megacrystic DCC (9d); megacrystic DCC (9c); large orthoclase crystal (9f).
- 9b Reverse side of large orthoclase crystal (9g); rock 60% augite (9h); pyroxenite (9i)
- 9c Coarse-grained syenite. Orthoclase 85% with some crystals up to 20 mm in length. Minor quartz, about 1%. Augite about 14%. About 1/4 of this rock is a mineralized phase of ultramafic minerals. Augite 90%, orthoclase 5%, and with 5% unidentified minerals, perhaps minor magnetite and the rock is only slightly magnetic. No sulphides could be identified but both malachite and azurite coat the surface.
- 9d Megacrystic DCC, 95% orthoclase with crystals up to 25 mm in length. The groundmass consisting of 5% of the rock is fine-grained muscovite. Non-magnetic. No sulphides.
- 9e Megacrystic DCC. 60% orthoclase with crystals up to 35 mm in length. The groundmass of 40% of the rock is fine-grained augite and magnetite. Slightly magnetic, no sulphides seen.
- 9f This rock is 20 mm thick. On the one side the orthoclase crystal is 75 mm by 61 mm. On the reverse side are two more crystals, the larger being 75 mm by 40 mm (9g). All these crystals show growth lines within the crystals. These crystals are within a finer grained groundmass of 40% orthoclase and 60% pyroxine, mostly augite with some magnetite. Only slightly magnetic. This sample is exfoliated off of a larger boulder.
- 9h Rock 60% augite crystals within a fine-grained groundmass of 35% of augite. Some orthoclase, silica veinlets and some epidote and magnetite. Five percent of the groundmass is sulphides of which 50% is pyrite and 50% chalcopyrite. Moderately magnetic.

- 9i Pyroxenite 95% fine-grained augite and magnetite with less than 4% fine-grained orthoclase crystals. About 1% sulphides, mostly chalcopyrite with malachite. Moderately to strongly magnetic. Very dense heavy rock. These rocks were collected from the same borrow pit as DKSYN 2010-007 where the analysis results gave 500 ppm for copper.
- 9j & 9k Photos of large megacrystic boulders that may be a source of dimension stone.

## **RESULTS**

Again the mapping in this area expanded the occurrence of the DCC rocks (see Fig. 7 DCC rocks mapped by Bragg).

This mapping has indicated that much of the area is underlain by DCC. The area of DCC on Fig. 7 is based only on outcrop. However, the glacier distributed float indicates that the DCC may underlay a much larger area.

Of the 22 samples sent for analysis, only the seep 2010-001 was anomalous, Au 409 ppb, Fe 21.16%, W 122 ppm. Sample 6 was not a sample from this area.

## **CONCLUSIONS**

This preliminary prospecting and investigation has indicated that there is considerably more DCC than was originally mapped and, as such, the DKSYN Claims have become a more prospective area that needs more detailed follow up.

## **RECOMMENDATIONS**

More detailed follow-up mapping and prospecting should be done to find more of the DCC outcrops. Although most of the pyroxenite rocks found so far are only mildly or moderately magnetic, perhaps a ground magnetic survey might outline the pyroxenite. All the seep samples should be run again using a different digestion method.

Again, this should be done on the road system on the south side of the Osilinka River. More detailed prospecting should be undertaken in the immediate area of this investigation.

## STATEMENT OF COSTS

Mobilization and demobilization costs including the following:

Prorated Wages - D.K. Bragg	35.5 hrs @ \$40/hr	\$ 1,420.00	
Prorated Truck Costs		284.00	
Prorated Expenses		<u>556.75</u>	\$ 2,260.75
D.K. Bragg Wages in Field	73 hrs @ \$40/hr		2,920.00
Prorated Truck Rent			497.00
Prorated Trailer rent			284.00
Prorated Camp and Kitchen Gear Rent			426.00
Meals Served	27 @ \$12/meal		324.00
Prorated Camp Supplies and Expenses			269.79
Assays	22 Samples @ \$50		1,100.00
Report Preparation			<u>1,200.00</u>
	<b>TOTAL COST</b>		<b><u>\$ 9,281.54</u></b>
	<b>COST</b>	<b>\$ 9,281.54</b>	
	<b>PAC</b>	<b><u>2,784.46</u></b>	
		<b><u>\$12,066.00</u></b>	

## QUALIFICATIONS OF DONALD K. BRAGG

I, Donald K. Bragg, Prospector, state as follows:

- Graduated Armstrong High School, Armstrong, B.C.
- Attended U.B.C. from 1958 to 1962, Faculty of Arts and Science, in Honours Geology.
- Worked in mineral exploration since 1956.
- Worked for Kenco Explorations during the summers of 1956, 1957 and 1959 in the Yukon and Northern B.C. as an assistant prospector, head prospector and geochemical sampler under the direction of Dr. R. Cambell and R. Woodcock.
- Worked as head prospector for the Nahanni Syndicate in the Northwest Territories in 1960 under the direction of Doug Wilmont.
- Worked as head prospector in the Yukon for Dualco in 1961 under the direction of E. Wozniak.
- Worked as head prospector for Mining Corp. of Canada, Southwestern B.C. in 1962 under J.S. Scott and Dr. K. Northcote.
- Worked as head prospector during the summer of 1963 for the Francis River Syndicate in central Yukon under the direction of Dr A. Aho.
- Worked as field geologist in the Greenwood area of B.C. for Scurry Rainbow Oil in 1965 under the direction of Bill Quinn.
- Worked as field supervisor for Alrae Explorations Ltd. from September 1965 to April 1967 under the direction of Rae Jury.
- Since 1956, self-employed contractor hired by various mining companies in the following fields: prospecting, property examination, claim staking, line cutting, topographical mapping, geological mapping, reconnaissance mineral sampling, draughting, air photo interpretation, geochemistry, geophysics, supervising property exploration programs, setting up bush camps, and camp manager.
- Since 1956, self-employed prospector working in various areas in British Columbia and on self-owned properties.

- Assisted in teaching field procedures for Geochemical Explorations Section of the Ministry of Energy, Mines and Petroleum Resources Mineral Exploration Course For Prospectors under the direction of Dr. S. Hoffman in 1984, 1985, 1986, 1987, 1988.
- Received the B.C. Provincial Grubstake Award for the years 1964, 1968, 1969, 1970, 1980, 1981, 1982, 1983, 1984, 1986, 1987, and 1988.
- Worked in the Rossland Camp from 1971 to 1991 as prospector/miner on the Snowdrop and Blue Bird Claims, and mining exploration contractor.
- Worked in the Osilinka and Cut Mountain area with Lysander Mining Corporation during the 2004, 2005, 2006, 2007, 2008 field seasons under the direction of Peter E. Fox, Ph.D., P.Eng., in setting up and managing the camp, prospecting, and mapping the area.

Respectfully submitted,

**D. K. Bragg**

**TOPOGRAPHY & GE OLOGY**

**DKSYN CLAIMS**

094C 002 & 003

To accompany GEOLOGICAL, TOPOGRAPHICAL and PROSPECTING REPORT on the DKSYN CLAIMS dated June 15, 2011 by D. K. Braag

SCALE: 1 - 5000 DATE: June 15 2011  
DRAWN BY: D.K. Braag FIG: 9

**LEGEND**

- Logging road - - - - -
- Trail - . . . . .
- Stream - - - - -
- Intermittent stream or gully - - - - -
- Rock outcrop - - - - -
- Silt sample site ● 2011-001
- Soil sample site ○ 2011-002
- Rock sample site ⊗ 2011-003
- DucKling Creek Complex
  - Syenite and mega crystic rocks
  - Pyroxenites, Serpentinized rocks

**Assay Results**

Silts	Au ppm	Cu ppm
2010-002	<0.1	254.5
2010-004	<0.1	62
2010-005	<0.1	109.1
2011-006	<0.1	132.7

Rocks	Au ppm	Cu ppm
2010-001	17.8	365.9
2010-003	11.0	67.4
2010-007	190.9	49.6
2010-008	45.6	500.0
