Introduction & Location

The Fox2 property, tenure #617223, lies approximately 17 air kilometers due-east of the City of Hope. The tenure is an eight cell mineral claim situated on Montigny creek, a small tributary of Sowaqua creek. Sowaqua Creek is a northwesterly flowing tributary of the Coquihalla River. The property lies within the Coquihalla Gold Belt, a northwest trending mineralization zone, underlain by the Hozameen Fault. The general area is well notarized for hosting gold-bearing mineralization, with the more prominent deposit being that of the Carolin Mine, located approximately 15 kilometers to the north-north west.

Access

Leaving the City of Hope, travel north on Hwy 5 (Coquihalla Hwy) approximately 22kms, then exit the highway at the Sowaqua Creek turn off. Travel down the exit ramp and enter the large gravel parking area; on your left is the sign denoting the entrance to the Sowaqua Creek Forestry road. Travel up this rough (some heavy rain damage & washed out areas) two-lane gravel road 14kms to reach the western boundary of the claim.

Previous Work in the Area

On investigation into the Sowaqua Creek Valley, I found two historical Minfile reports (092HSW148 & 092HSW080) and an Aris report 11449 that revealed that some values of gold and platinum had been found. I did not find any reference to Montigny Creek.

General Area Geology

In reference to the above noted work reports, the tenure's area generalized geology is described as being underlain by Permian to Jurassic Hozameen Complex rocks comprised mainly of inter-bedded chert, pelite and volcanic sandstones with distinct gray and black banding. The ultramafic rocks which occur along the Hozameen fault are part of the Coquihalla Serpentine Belt. Thirty-three samples containing silica with visible pyrrhotite and pyrite were assayed. Assays yielded traces of gold, silver, copper and nickel(Assessment Report 11449).

Summary

On September 3, 2011, Reconnaissance prospecting was conducted on a plateau 40 to 50 meters above Montigny Creck. We parked our vehicle at the terminus of an old logging spur road that exits to the left from Sowaqua Creek FSR at 14.9kms from the Coquihalla Hwy.

Please reference to map # 3 – attached

From the vehicle, We hiked approximately 1 kilometer along the ridge of the river gulley, through a heavily forested area. We moved boulders and dug holes to obtain numerous grab samples of the area we hiked through. We sifted and classified approximately 200 kilograms of the raw material on the site down to .45mm minus. We collected approximately 20 kilograms of concentrated material for further processing.

Conclusions

Using manual crushing methods and hydro emulsion processes, we separated and inspected the material. The material from this area produced produced 60 small flakes of gold, approximately 1.3 grams. It was decided that further exploration was required. The tenure was renewed for another term.

Work Evaluation & Cost Statement

September 3, 2011

---- 12.0 Man Hours Prospecting---

Labor	6.0 hours	\$ 120.00
Supervisor	6.0 hours	\$ 150.00

		\$ 270.00
Allowable Vehicle Expenses (20%)		\$ 54.00
Allowable Meal Expenses		26.00
Report Preparation		50.00

	Total	\$ 400.00

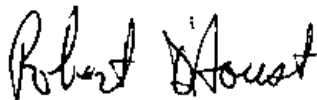

Attending Parties & Qualifications

Robert D'Aoust – 27 years prospecting experience
finc – 106134

John Crowe – 4 years prospecting experience

December 31, 2011
