APPENDIX IV

STATEMENT OF QUALIFICATION

APPENDIX IV

STATEMENT OF QUALIFICATION

I, Jian Zhao (Jim) Yin, do hereby certify that:

I am a geologist with over 20 years experience in the field of metals (mainly gold) and industrial minerals (mainly diamond) exploration, property evaluation, management, and mine geology, with Chinese, Australian, American and Canadian mining companies respectively.

I hold a B.Eng. in Geology, Minerals Prospect & Exploration (1986) and a M.Sc. in Geology of Mineral Deposits (1989) from College of Earth Sciences, Jilin University, Changchun, Jilin Province, P. R. China; and a Ph.D. in Geology of Mineral Deposits from China University of Geosciences, Beijing, P. R. China (1993).

I am a registered Professional Geoscientist (License #: 30402) with the Association of Professional Engineers and Geoscientists of British Columbia and have maintained my registration in good standing since becoming registered in B.C.

I was directly involved, as Consulting Geologist, in the work described in this report. I am responsible for all the sections of the report.

I do not own any interest, or have an agreement to be or become an insider, associate, or employee, of Barkerville Gold Mines Ltd. or any of its sister companies, involved in the Cariboo Gold Project.

Jim Yin, Ph.D., P.Geo.
9280 Kirkmond Crescent
Richmond, B.C. V7E 1M8

375																		
380											383-384.3							383-384.3; darker grey coloured silica flood with bands
											Sf			5.0	DisRpl			containing 10% pyrite. Looks like Bonanza Ledge, but to
385																		much Qtz
	387.7	389.5	QV			D	W							5.0	Clt			
390																		389.5-398; notable increase in grey folia quartz.
																		399.5-400; vein continues along axis. Pyritic. Cold
395																		contacts
																		399.5-407;Light grey-green, silty looking, with rounded
400																		Qtz fragments. Pseudo conglomerate turn into a tannish-
																		green silicios clay by 407
405	407.0	412.5	QV30	Pl70			DkGyW							10.0	NSFr			Series of low angle? Qtz veins altering host to a dark
																412.5-446		grey, pseudo-mylonite. Majority of pyrite in veining.
410																3Mt	Dis	
																		412.5-441.8; Light greyish-green; weak sheared
415																		appearance,porphoblastic, moderately crenulated around
																		Qtz stringers and boudins
420																		
425																		
430																		
435																		
440																		441.8-555.5;Fairly uniform throughout. Magnetite
																		porphoblasts vary from trace to sections of 3%
445
