SON OF CAPTAIN PROPERTY

ROCK GEOCHEM & PROSPECTING REPORT

Craig Kennedy

September 2014

1.00 INTRODUCTION

1.10 Location and Access

The Son of Captain mineral claims are located approximately 22km east of Creston BC. Access to the property is gained off of Highway 3 onto recent and older logging roads. Most of the property is easily travelled on foot, although steep slopes occur on either side of Hazel Creek. The claims are centred near UTM coordinates 558000E – 5446000N.

1.20 Property

The Son of Captain mineral claims covered by this report are tenures: 986502, 1019181, 1019228, 1019229 & 1019321 and 1020878, a contiguous block of claims owned by Tom Kennedy of South Slokan BC.

1.30 History

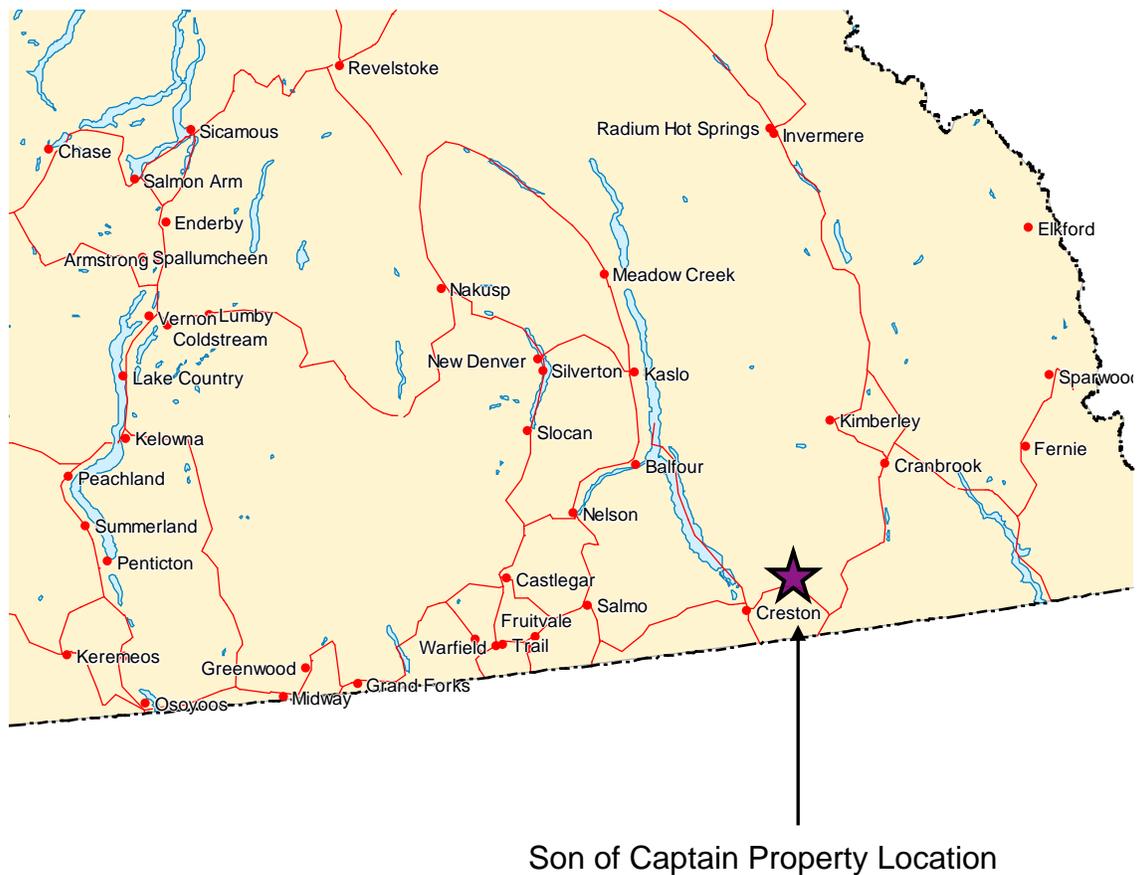

This area has been held under tenure on and off through the past 60 years. Historic exploration work in the area of the property is extensive with individuals, junior and major exploration companies all taking opportunities to explore. Prospecting, geology, rock and soil geochemistry, geophysics, trenching and drilling have all been employed.

1.40 Summary

As previously stated the structural setting of the Son of Captain property is complex and unique. The property is thought to overlie a reverse panel of faults which form a horst block. (Wiklund Horst) This structural domain exists between the Moyie Fault to the east and the Carol Creek Fault on the west. Both faults dip west and the Moyie Fault is noted as having a number of important mineral occurrences along its strike. It is interpreted that the Wiklund Horst represents the core zone of a proterozoic basin that has been elevated by reverse fault movement specifically the Spider Creek and Hydro Faults. Evidence is indicated

by observations of alterations, tectonic disturbances, mineral occurrences and anomalous rock geochemistry. Visibly the lithologies enclosed by the Hydro and Spider Creek Faults show a higher degree of alteration and metamorphism than rocks that boarder the Horst.

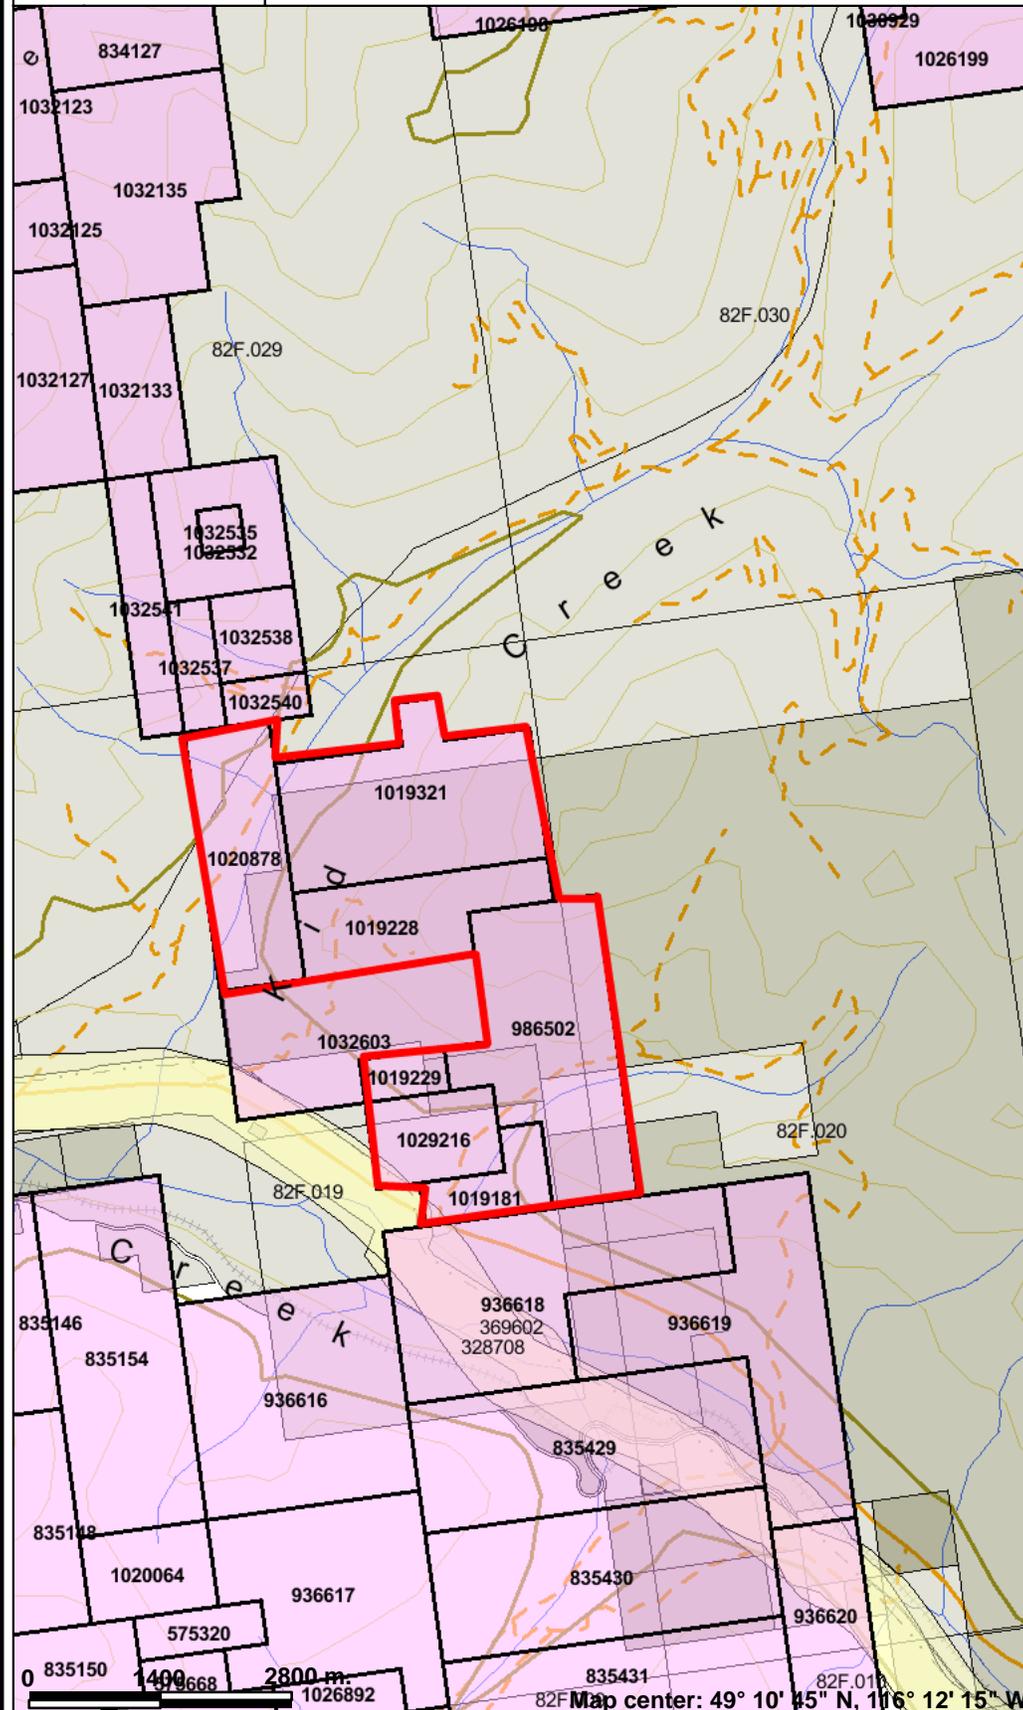

Figure 1: Regional Location Map

2.00 Prospecting Program

Prospecting was conducted on the crown portion of mineral claims 1029216, 1019229 and a portion of tenure 986502. Bedrock outcrops are scarce with mostly thick glacial till covering more moderate slopes. The few outcrops noted on the prospecting traverse were sericite and chlorite altered with some minor occurrences of pyrrhotite and or pyrite. Dio-gabbro intrusives also show quartz veining and carbonate alteration. All gabbros tested were non-magnetic. Shearing associated with carbonate and manganese alteration is noted at a number of sediment dio-gabbro contacts. Liesegang alteration is also very obvious in areas of more intense foliation and shearing. Local folding of sediments was also noted with the liesegang alteration. A number of areas provided what is thought to be locally derived granophyre/granofel fragmental float. This float material can contain an abundance of iron sulphide, most of which is pyrrhotite. Also of interest is the occasional piece of carbonate altered dio-gabbro float. These boulders often have a punky rind with a more siliceous pyrite altered center. These boulders may be carbonatite which are related to the Spider Creek Fault which is projected to exist within the area prospected. The other float of potential interest is limonitic altered vuggy bull quartz. This material also hosts chlorite and biotite.

3.00 CONCLUSION

Prospecting has confirmed wide spread chlorite-liesegang alteration similar to that recognized with base and precious metals on other areas of the property. Carbonate altered float may indicate an opportunity for discovery of carbonatite intrusives along the trace of the Spider Creek Fault. Thick overburden inhibits prospecting, geology and soil geochemistry, It is recommended a tight spaced mag/Em survey along the projection of the Spider Creek Fault be completed. This activity may provide an opportunity for mechanical trenching.

4.00 STATEMENT OF EXPENDITURES

Prospecting & Geochem, Son of Captain

Work performed: June 29 – July 5, 2014

Craig Kennedy - 2 days @ 500/day	\$1000.00
2 vehicle days @ 100/day	200.00
Tom Kennedy - 1 day @ 500/day	500.00
1 vehicle day @ 100/day	100.00
Acme Labs	160.00
Report	<u>800.00</u>
Total:	<u>\$2760.00</u>

5.00 AUTHOR'S QUALIFICATIONS

As the author of this report I, Craig Kennedy, certify that:

1. I am an independent prospector residing at 2290 Dewolfe Avenue, Kimberley, BC.
2. I have been actively prospecting in the East and West Kootenays district of BC for the past 34 years and have made my living prospecting for the past 25 years.
3. I have been employed as a professional prospector by major and junior mineral exploration companies.
4. I own and maintain mineral claims in BC and have optioned numerous claims to various exploration companies.
