MAILING ADDRESS:

As above

PROPERTY GEOLOGY KEYWORDS (lithology, age, stratigraphy, structure, alteration, mineralization, size and attitude):

Eocene Ootsa Lake Group rhyolite flows and pyroclastics exhibit weak argillic alteration with very minor pyrite. Rhyolite centres are emplaced along a northwest trending structure which passes through Blackwater-Davidson, Capoose and Windfall Hills. Best historic values are 42 m of 0.41 g/t Au in trench 94-4. Best values in this program are 28 m of 0.9 g/t Au in WH-14-03

## **1.0 Introduction**

This report documents the work of a ten person mineral exploration crew on the Windfall Hills Property (the property) carried out from the 11th of July, 2014 to the 13th of August, 2014. The main purpose of the mineral exploration program was to drill test gold showings on the property. Three NQ diamond drill holes were completed, totaling 1149m. 95.4% of the core was cut lengthwise with a diamond bladed saw and sampled in 1.0 to 2.0 metres lengths. The drilling was successful in outlining economic grades of gold mineralization, including 28.0 m of 0.9 g/t gold.

### **1.1 Location and Access**

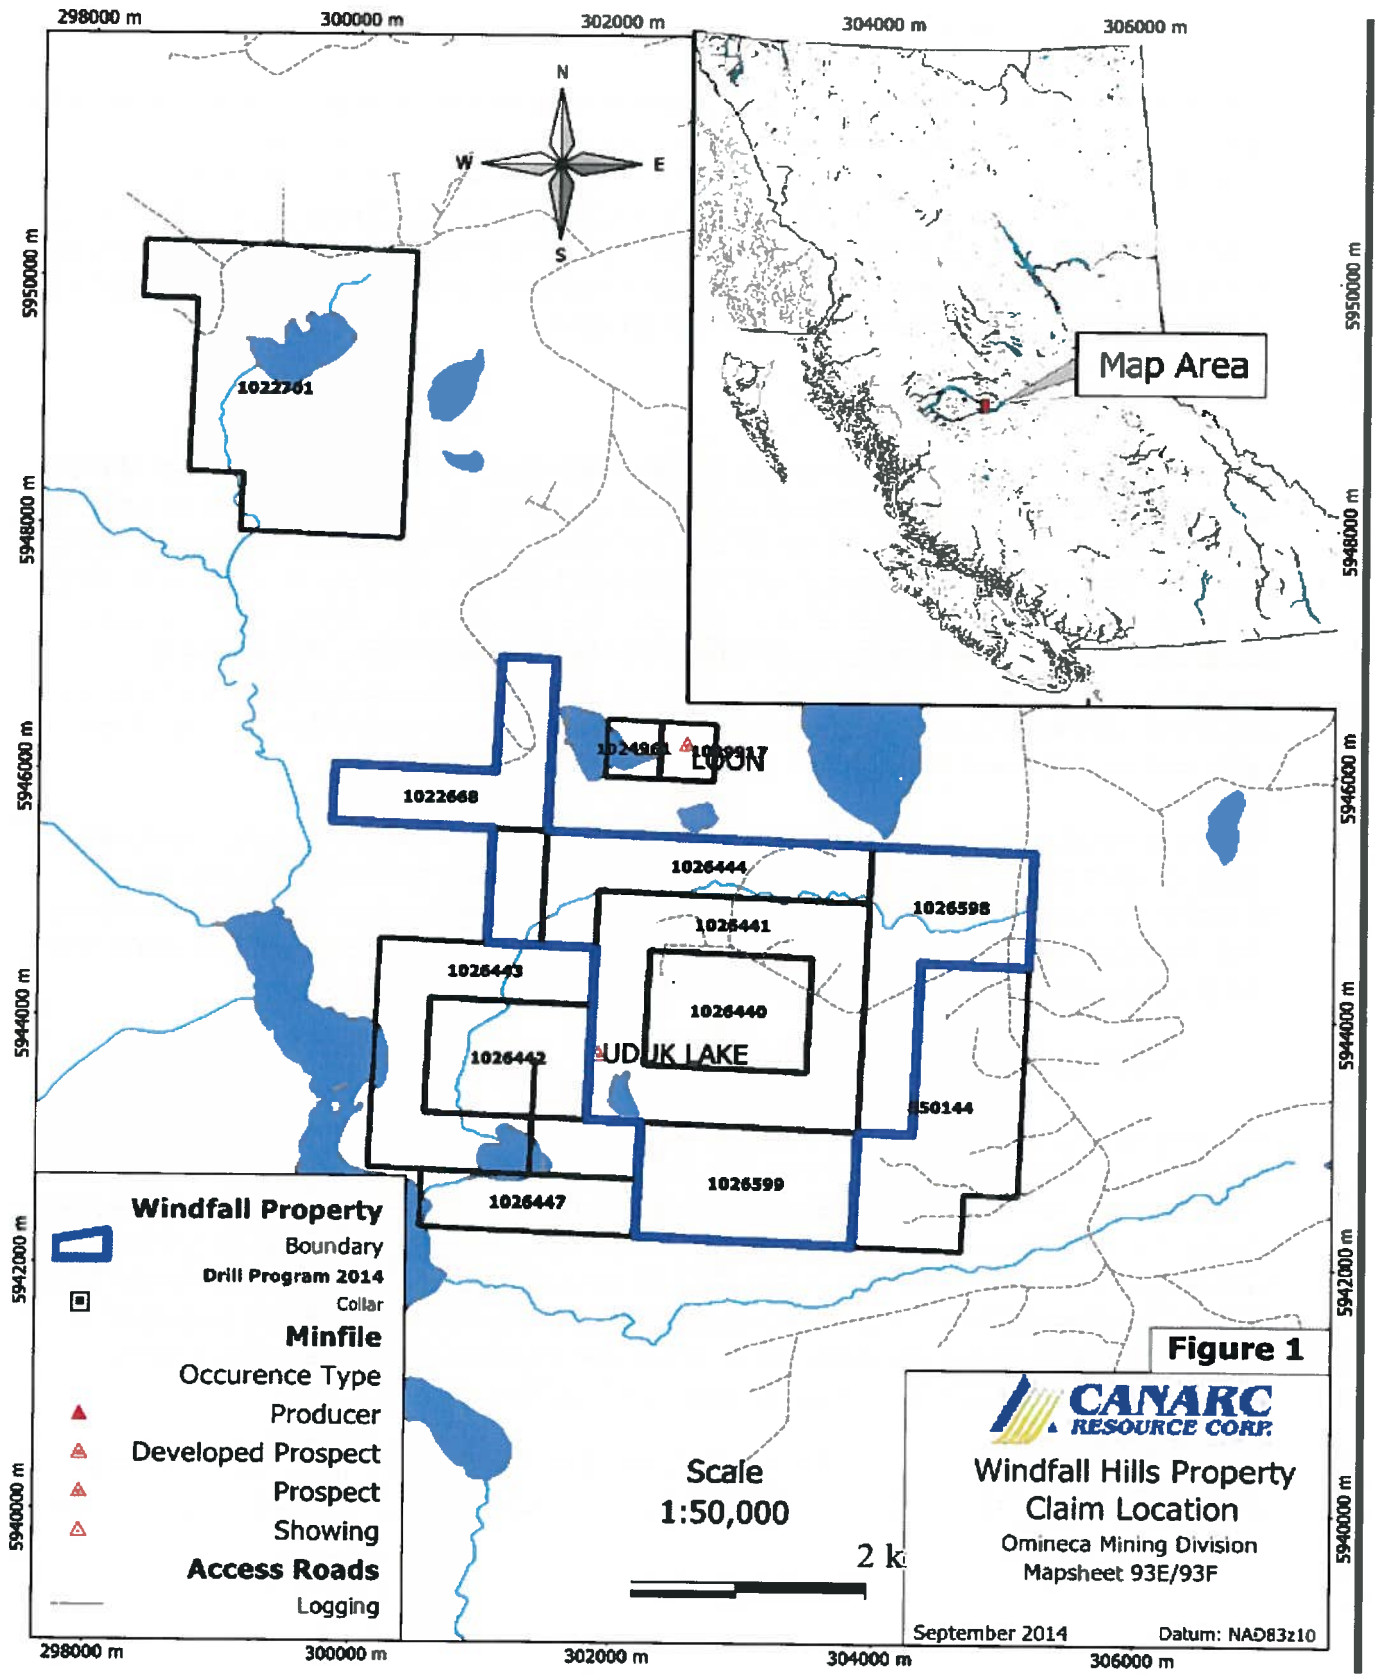

The property is located in west central British Columbia, 244 kilometres west of Prince George and 70 km south southwest of Burns Lake (Fig. 1). Access from Burns Lake is south by paved BC Highway 35 for 70 km. to Ootsa Lake then 35 km. southeast along the north shore of Ootsa Lake by well maintained logging mainlines to a barge landing on Tahtsa Reach. This barge landing can also be accessed by driving 120 km. west southwest from Vanderhoof on well maintained logging mainlines. The barge is presently owned by the Cheslatta Indian Band. The Business Development Officer for the Band, James Rakochy, schedules barge crossings. Transportation across Ootsa Lake can be arranged through Mr. Rakochy at 250 694 3334.

From the south shore barge landing proceed 20 km. west northwest along the south shore of Ootsa Lake to the Chief Main Road. This logging mainline proceeds south, crossing the north east corner of the property and skirting the east side of the property (Fig. 1). Eight logging spur roads extend west and southwest off of the Chief Main onto the property providing good access to most of the property.

### **1.2 Physiography and Climate**

The property covers an area of the Nechako Plateau with subdued topography. Elevation ranges from 1,205 metres at Loon Lake on the eastern edge of the property to 1,307 metres on the western edge of the property. Landforms are affected by a strong glacial movement to the northeast. Over 99% of the property is covered by glacial till that ranges from less than one metre thick to tens of metres thick with an average cover of less than two metres. Outcrop is only present on the southwest facing slopes of prominent knobs on the property, all of which are rhyolite volcanic centres, and in ditches and borrow pits from logging road construction.

The Biogeoclimatic Ecological Zone is Sub-Boreal Pine Spruce. The property area covers mature stands of spruce and pine. Approximately 50% of the property has been

clear cut. Greater than 80% of the remaining mature pine is standing dead from pine beetle infestation.

The climate is northern interior with long cold winters starting in November and lasting until mid to late April. Precipitation is light in winter with snowfalls of 0.7 to 1.5 metres. Summers are relatively wet with rainfall often exceeding 10 cm per month.

### 1.3 Property Status and Ownership

The property covers 997.59 ha in 6 claims. Canarc Resource Corp.(Canarc) is the registered owner of these claims. Claim details are shown in Table 1 below. Figure 1 shows mineral tenure locations.

**Table 1 Claims, Ownership and Status**

<b>Tenure #</b>	<b>Claim Name</b>	<b>Owner</b>	<b>Good to Date</b>	<b>Area (ha.)</b>

			<b>Total</b>	997.59

### 1.4 Regional and Local Geology

The oldest layered rocks in the region are Upper Triassic/Lower Jurassic Takla Group composed of volcanic and sedimentary strata. Andesite to basalt flows and pyroclastics are overlain by shale, conglomerate and greywacke.

Middle to Lower Jurassic Hazelton Group andesite with minor chert pebble conglomerate, sandstone and shale overlie the Takla Group.

This package has been intruded by Late Cretaceous to Tertiary granodiorite, quartz diorite and granite.

Upper Cretaceous to Eocene Ootsa Lake Group rhyolite to dacite flows, tuffs and breccias, the host of the mineralization on the property, intrude the older rocks.

Much of the area was covered by Miocene to Pliocene plateau basalt of the Chilcotin Group.

A veneer of glacial till covers the region. The most recent glacial activity was from south-west to northeast. The till is generally one to two metres thick but can be much thicker in valley bottoms and on the lee side for

This region is an extensional tectonic environment and has been described as a mini "Basin and Range".

The property covers Ootsa Lake Group rhyolite. Less than 1% of the property is outcrop. Generally glacial till is thinner on southwest faces of ridges and hills. In these areas overburden can be one metre or less. Subcrop can be found in these area in the roots of fallen trees.

Five mappable units have been distinguished in the Ootsa Lake rhyolite:

Unit 1 - Rhyolite to rhyodacite tuffs and breccias.

Unit 2 - Flow banded rhyolite. Grey to purplish in colour.

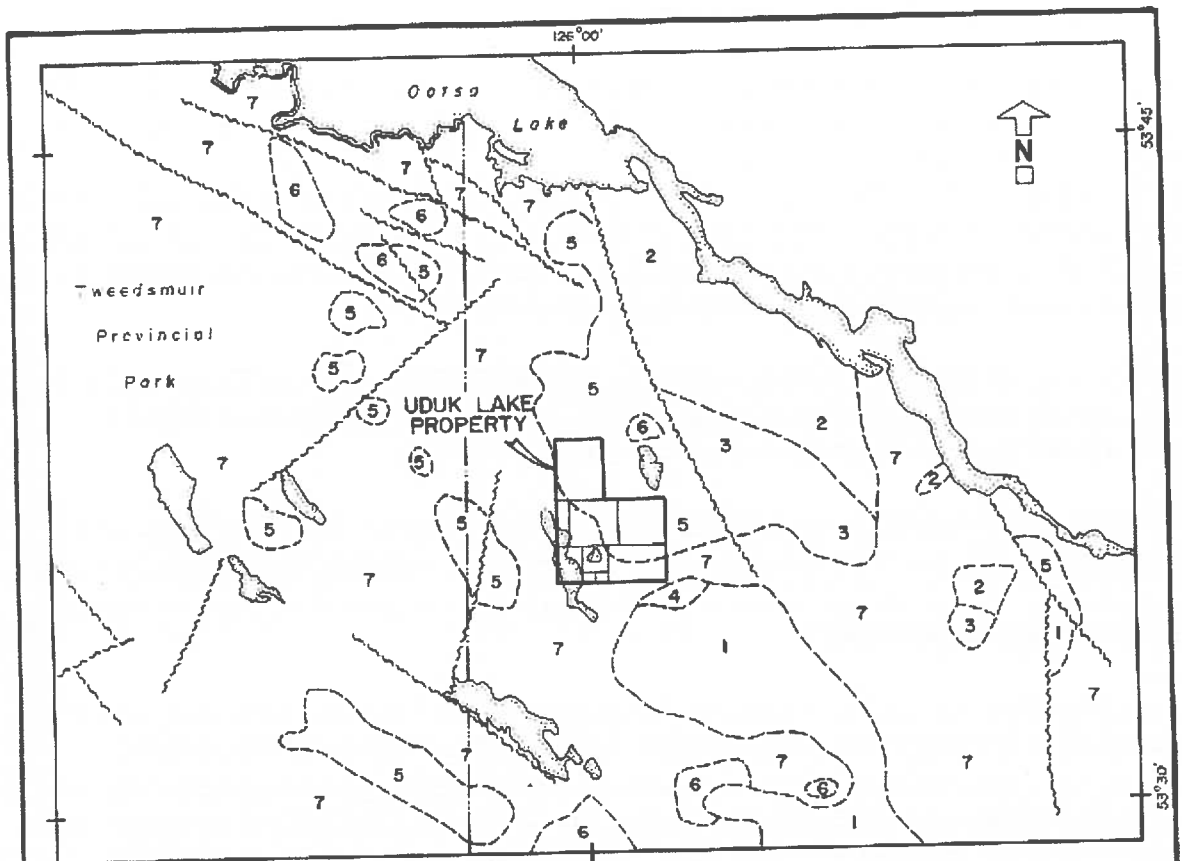

Unit 3 - Porphyritic rhyolite, 10% - 20% quartz, 0% - 20% feldspar.

Unit 4 - Orbicular dacite, greenish grey in colour.

Unit 5 - Fine grained andesite float.

An argillized granite? outcrops in the central Duk 1 claim.

## **1.5 Exploration Targets and History**

The main mineral exploration targets on the property are disseminated gold ore bodies associated with Cretaceous to Tertiary rhyolite volcanic centres, similar to the Round Mountain deposit in Nevada or, closer to home, the Blackwater/Davidson Property being developed by New Gold approximately 100 km. southeast of the property. These deposits are low sulphidation epithermal gold deposits characterized by near surface low temperature, low pressure deposition of gold associated with multiple periods of silicification, minor pyrite and pervasive argillic alteration.

Part of the area of the property was originally staked in 1981 by Amax Exploration Ltd. who carried out reconnaissance mapping and sampling but allowed their claims to lapse. In 1984 the property area was re-staked by S. Travis.

Asitka Resource Corporation optioned part of the property and conducted rock and soil geochemical sampling in 1985 and 78 metres of Winkie drilling in three holes in 1986 on the property. Values ranged from 20 to 1450 ppb gold in quartz stringer stockwork zones intersected in drill holes.

Pacific Comox Resources Ltd. optioned the property from Travis in 1987 and, in 1988, sub-optioned to Chalice Mining Inc. Chalice conducted a program of line cutting, geological and geochemical surveys, an Induced Polarization geophysical survey and 358 metres of diamond drilling in five holes on the property. Chalice did not exercise their option and the property reverted to Pacific Comox.

Pioneer Metals Corp. optioned the property in 1993 and carried out a soil geochemical program that year followed by further geochemical sampling, geological mapping and six mechanized trenches in 1994 on the property. All six trenches returned values greater than 0.1 g/t gold with the whole 42 metres of TR-94-4 averaging 0.41 g/t gold including six metres of 1.4 g/t gold. Pioneer terminated its option in 1996.

In 1997 Atna Resource Ltd. purchased the property from Pacific Comox and optioned 60% of the property to Gold Mountain Resources Ltd. Atna carried out a soil geochemical survey, geological mapping and an Induced Polarization geophysical survey in 1997.

In 2011 Canarc Resource Corp. optioned the property from Atna and Dunn and carried out a soil geochemical and prospecting program.

Subsequently, in 2012 and 2013, Canarc purchased 100% of the property and carried out the drill program documented by this report in 2014.

## 2.0 2014 Diamond Drill Program

The 2014 program on the Windfall Hills property consisted of the drilling of 1149 metres of NQ core in three holes. The drilling was carried out by Omineca Diamond Drilling from Burns Lake from the 22nd of July, 2014 to the 12th of August, 2014 using a Discovery 001-14 drill. Collar locations, inclinations, azimuths and total depths are shown on Map 1. Detailed drill logs are included in Appendix B. Analytical results and methods are included in Appendix C.

95.4% of the core was cut in half lengthwise using a diamond bladed saw. Half the core was placed in a six mil plastic sample bag with a unique numbered tag and sealed with a lock strip or flagging tape. 548 samples were taken, mainly at 2.0 metre intervals, and shipped to an AcmeLabs preparation facility in Smithers by Bandstra Shipping. A 50 gram representative pulp was prepared and shipped to Vancouver where 30 grams were analyzed for 30 elements by ICP-MS. Samples with over 500 ppb gold were automatically fire assayed for gold to provide a more definitive value.

All three drill holes were drilled into the Cretaceous to Tertiary Ootsa Lake formation consisting of mainly Rhyolite and Dacite pyroclastics. Overburden was minimal, averaging 1.0 metres.

**WH-14-01** was drilled 242 metres southwest from 302363mE, 5944366mN at an inclination of -50° to test gold and silver soil anomalies and a postulated north trending structure. This hole intersected mainly Rhyolite and Dacite breccias but transitioned into Andesite Tuff for the final 80 metres of the hole. The upper part of the hole contained pyrite and some quartz stringers. The first six metres assayed 955 ppb Au with anomalous gold values persisting to 165 metres.

**WH-14-02** was drilled 386 metres southeast from the same pad, 302366mE, 5944371mN, at an inclination of -50° to test soil and trench rock chip anomalies. This hole contained considerably more quartz stringers than the first hole and, after a fault at 89.4 to 110 metres, considerable pyrite and anomalous but subeconomic values in gold.

**WH-14-03** was drilled 521 metres at an inclination of -50° southeast from approximately 180 metres southeast of holes WH-14-01 and WH-14-02 at 302462mE, 5944371mN. This hole was drilled to test the area 350 metres vertically below the highest grade historic trench, Tr-94-4 (42m @ 0.41 g/t Au). This hole was collared in rhyolite breccia. A major fault zone was intersected from 17.7m to 73.5m at 60° to core axis. This fault zone is highly mineralized, with up to 10% pyrite. The fault is composed of 10% to 50% quartz, 10% to 30% gouge, 10% to 40% dacite fragments. A 28 metre section of the fault zone, from 11m to 39m down hole, averaged 0.9 g/t gold. The core contains anomalous but sub-economic values in gold to 195m down hole. The remainder of this hole graded into dacite and then andesite with minor basalt, all with background gold values.

### 3.0 Conclusions

The drill program confirmed that the gold showings on the Windfall Hills property are the same type of mineral deposit as Round Mtn. in Nevada and the Blackwater Davidson property 100 km to the southeast, essentially quartz stockworks in rhyolite to dacite pyroclastic rock units with accompanying argillic alteration. The 1149 metre drill program intersected 28 metres of 0.9 g/t gold from 11m to 39m down hole in WH-14-03. A further 575 metres in parts of all three holes were anomalous (> 50 ppb Au) or highly anomalous (> 100 ppb Au) in gold. Generally, the top of all the holes were anomalous with values decreasing towards the bottoms. Specifically, **WH-14-01** averaged greater than 50 ppb gold from 1.0 to 141 metres, **WH-14-02** averaged greater than 50 ppb gold /6

from 1.1 to 269 metres and **WH-14-03** averaged greater than 50 ppb gold from 0.9 to 195 metres. This shows the Windfall Hills deposit is a large system with a very large gold endowment.

Due to the core portion of the property being designated as an archaeological site by the Ministry of Forests it was not possible to get direct access to drill the the best surface historical showing on the property, Tr-94-4 with 42 metres of 0.41 g/t gold. To gain access it is necessary to get a permit and complete an archaeological assessment to identify any artifacts and determine what measures are necessary to protect them. Due to the length of time required to complete this process it was not feasible to complete it in time for the 2014 drilling program.

A logging right of way has been cleared in the area and passes within 20 metres of Tr-94-4. A proposed drill hole on this road was rejected by MEM.

The author has crossed this area more than thirty times, built a trail for an excavator across it, dug seven trenches in the archaeological zone and has not observed anything of archaeological significance. It is highly likely that the "archaeological" values are the evidence of historic mineral exploration activity by Pioneer Metals Corp. in 1993 and 1994 and Pacific Comox Resources Ltd in 1988.

#### 4.0 Recommendations

A minimum of 1,500 metres of drilling should be carried out with three main objectives:

- 1/ Extend the mineralization intersected in WH-14-03.
- 2/ Test the area of Tr-94-4.
- 3/ Test other gold in soil anomalies to the northeast.

Specifically, the following six holes should be drilled:

Drill Hole	UTM	Azimuth	Inclination	Depth
WH-15-01	302560mE 5944350mN	135°	-50°	200m
WH-15-02	302648mE 5944384mN	135°	-50°	200m
WH-15-03	302738mE 5944436mN	135°	-50°	200m
WH-15-04	302702mE 5944110mN	225°	-50°	500m
WH-15-05	302513mE 5944586mN	45°	-50°	200m
WH-15-06	302790mE 5944588mN	0°	-50°	200m

These drill holes should be sufficient to test the property and plan a much larger program, if warranted.

This work is estimated to cost \$350,000 and take two months to complete.

Respectfully Submitted,

David St. Clair Dunn, P.Geo.

Submitted By: Garry Biles  
Receiving Lab: Canada-Smithers  
Received: July 29, 2014  
Report Date: August 30, 2014  
Page: 1 of 5

## CERTIFICATE OF ANALYSIS

SMI14000410.2

### CLIENT JOB INFORMATION

Project: Windfall Hills  
Shipment ID: 0#, 12 Bags  
P.O. Number  
Number of Samples: 95

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	95	Crush, split and pulverize 250 g rock to 200 mesh			SMI
AQ202	95	1:1:1 Aqua Regia digestion ICP-MS analysis	30	Completed	VAN
FA430	3	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN

### SAMPLE DISPOSAL

RTRN-PLP Return  
DISP-RJT Dispose of Reject After 90 days

### ADDITIONAL COMMENTS

Version 2 : FA430-Au included.

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Canarc Resource Corp.  
301 - 700 West Pender Street  
Vancouver BC V5X 1V7  
CANADA

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. "\*" asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CERTIFICATE OF ANALYSIS

SMI14000407.1

### CLIENT JOB INFORMATION

Project: Windfall Hills  
Shipment ID: 02, 10 Bags  
P.O. Number  
Number of Samples: 76

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	74	Crush, split and pulverize 250 g rock to 200 mesh			SMI
AQ202	74	1:1:1 Aqua Regia digestion ICP-MS analysis	30	Completed	VAN

### SAMPLE DISPOSAL

RTRN-PLP Return  
DISP-RJT Dispose of Reject After 90 days

### ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Canarc Resource Corp.  
301 - 700 West Pender Street  
Vancouver BC V5X 1V7  
CANADA

CC: David Dunn

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. \*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CERTIFICATE OF ANALYSIS

SMI14000452.1

### CLIENT JOB INFORMATION

Project: Windfall Hills  
Shipment ID: 03, 15\_bags  
P.O. Number  
Number of Samples: 119

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	119	Crush, split and pulverize 250 g rock to 200 mesh			SMI
AQ202	119	1:1:1 Aqua Regia digestion ICP-MS analysis	30	Completed	VAN

### SAMPLE DISPOSAL

RTRN-PLP Return  
DISP-RJT Dispose of Reject After 90 days

### ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

CERTIFICATE OF ANALYSIS

SMI14000453.1

CLIENT JOB INFORMATION

Project: Windfall Hills
Shipment ID: 04, 11\_bags
P.O. Number
Number of Samples: 88

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Table with 6 columns: Procedure Code, Number of Samples, Code Description, Test Wgt (g), Report Status, Lab. Rows include PRP70-250, AQ202, and FA430.

SAMPLE DISPOSAL

RTRN-PLP Return
DISP-RJT Dispose of Reject After 90 days

ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Canarc Resource Corp.
301 - 700 West Pender Street
Vancouver BC V5X 1V7
CANADA

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval, preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. \*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

SMI14000478.1

CLIENT JOB INFORMATION

Project: None Given
Shipment ID: 05,11 bags
P.O. Number
Number of Samples: 86

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Table with 7 columns: Procedure Code, Number of Samples, Code Description, Test Wgt (g), Report Status, Lab. Contains two rows of sample preparation details.

SAMPLE DISPOSAL

RTRN-PLP Return
DISP-RJT Dispose of Reject After 90 days

ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Canarc Resource Corp.
301 - 700 West Pender Street
Vancouver BC V5X 1V7
CANADA

CC: David Dunn

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval, preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. \*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CERTIFICATE OF ANALYSIS

## SMI14000531.1

### CLIENT JOB INFORMATION

Project: Windfall Hills  
Shipment ID: 06, 11 bags  
P.O. Number  
Number of Samples: 86

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	86	Crush, split and pulverize 250 g rock to 200 mesh			SMI
AQ202	86	1:1:1 Aqua Regia digestion ICP-MS analysis	30	Completed	VAN

### SAMPLE DISPOSAL

RTRN-PLP Return  
DISP-RJT Dispose of Reject After 90 days

### ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Canarc Resource Corp.  
301 - 700 West Pender Street  
Vancouver BC V5X 1V7  
CANADA

CC: David Dunn

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. \*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## Appendix D

### Authors' Statements of Qualifications

I, **David St. Clair Dunn**, Professional Geoscientist, with a business address of 331 East 8th Street, North Vancouver, B.C., Canada, certify that:

1. I am a graduate of the University of British Columbia, Vancouver, B.C. and hold a degree of Bachelor of Science in Geology.
2. I have practiced my profession as a prospector and geologist for 45 years.
3. I am registered as a Professional Geoscientist with the Association of Professional Engineers and Geoscientists of the Province of British Columbia (Reg. # 18,479). I am a Fellow of the Geological Association of Canada and of the Association of Applied Geochemists, a member of the Canadian Institute of Mining, Metallurgy and Petroleum, the Society of Economic Geologists and the Mining Exploration Group. I co-authored the Assessment Report "Report on 2014 Drill Program on the Windfall Hills Property" and supervised the work described in the report.
4. I worked on the Windfall Hills Property, which is the subject of the Report, between the 6<sup>th</sup> of July to the 19th of July, 2011 and previously in 1993 and 1994. I have had mineral exploration experience on many other gold deposits including the Ericson mine, the Mitchell-Sulphurets properties, the Silback Premier Mine, Bralorne Mine, the Sheep Creek camp, Uduk Lake property and Puffy Lake Gold Mine in Canada. Outside of Canada I have worked on approximately 20 mainly epithermal gold deposits in six states of Mexico, Nicaragua, Cuba and Sumatra, Indonesia.
5. I co-authored the Report with James G. Moors, P.Ge. I wrote parts of the text of the Report and edited and supervised the preparation of the complete Report. I take responsibility for the accuracy and substance of the whole of the report.
6. I am not aware of any material fact or material change from the information in this Report that would make the Report misleading. As of the date of the certificate, to the best of the qualified person's knowledge, information and belief, the technical information that is required to be disclosed to make the Report not misleading has been disclosed.
7. I consent to the use of this Report for the purpose of a private or public financing.
8. I am independent of the issuer applying all tests set out in Section 1.5 of NI 43-101. I supervised work programs on this property for Pioneer Metals Corp. in 1993 and 1994. I hold a 2% NSR royalty on part of the property as described in this report.

Signed:

David St. Clair Dunn, P.Ge.      November 15, 2014

I, **James G. Moors** do hereby by certify that:

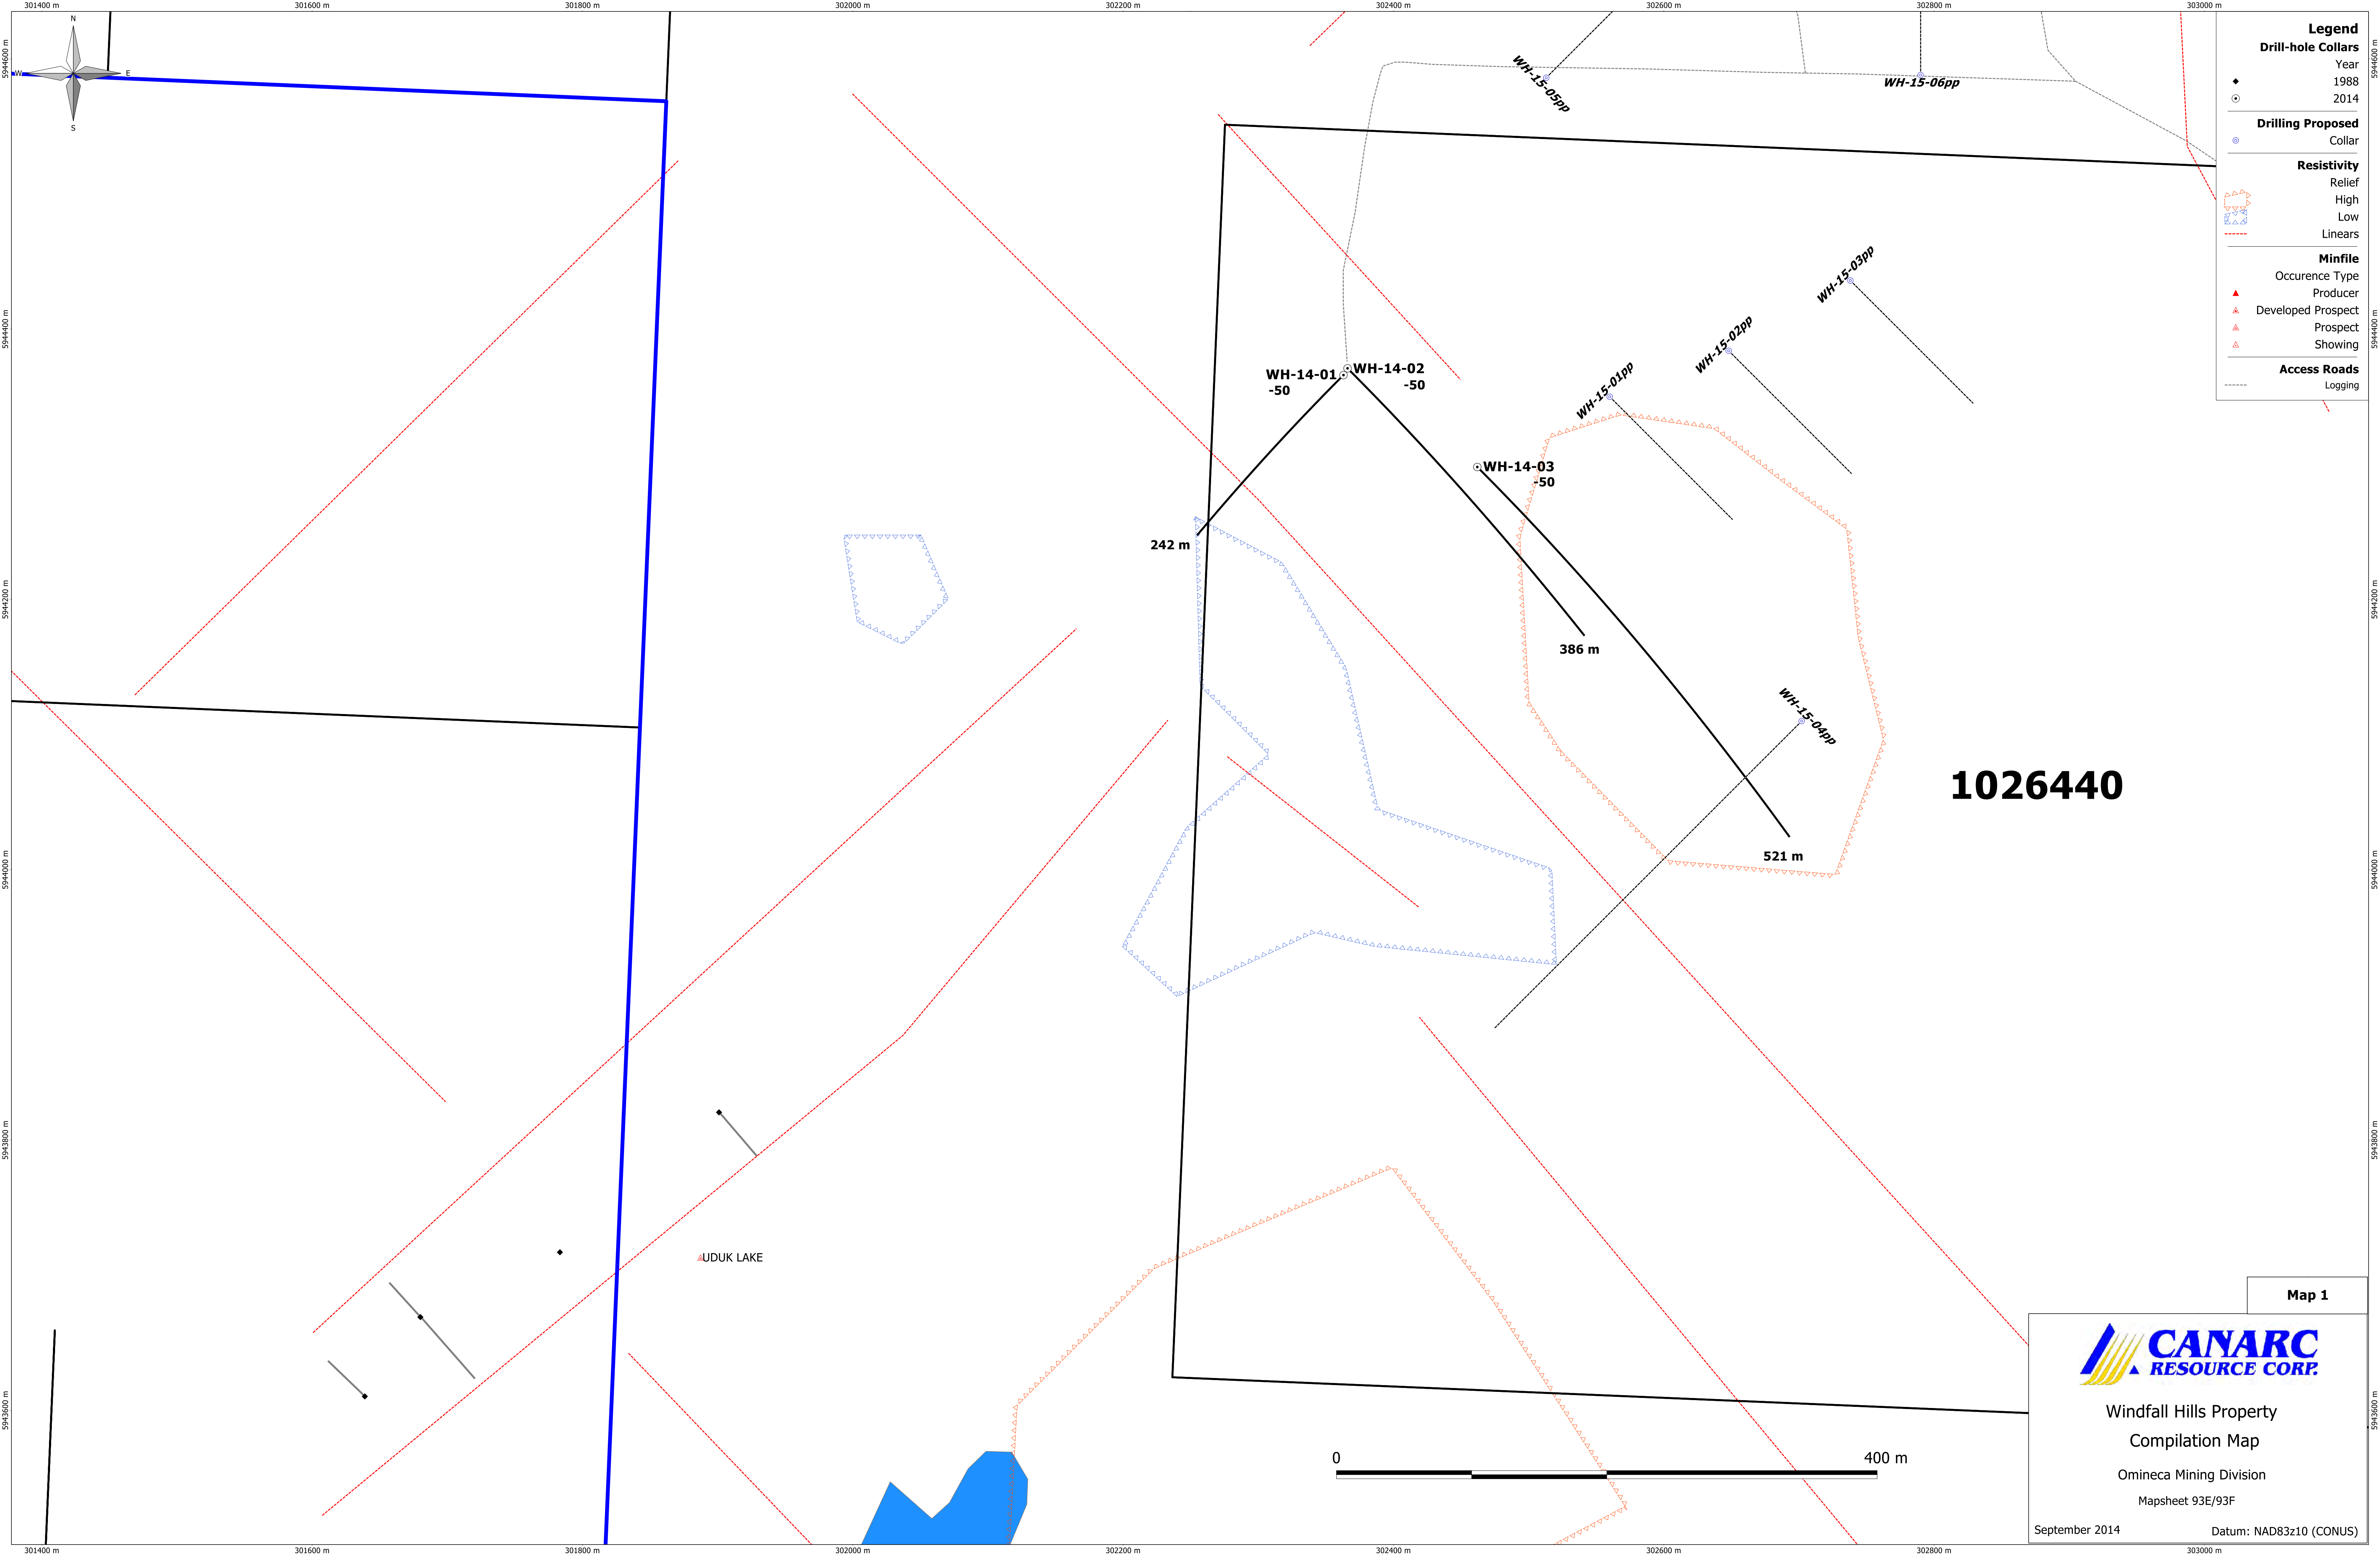

1. I graduated with a B.Sc. (Hons.) degree in Earth Science from the University of Waterloo in 1989.
2. I am a member in good standing of the Association of Professional Engineers and Geoscientists of British Columbia (No. 25807)
3. I have practiced my profession continuously for over 25 years and have examined and reported on numerous precious metal prospects and deposits throughout the world including northern British Columbia.
4. I am Co-Author of this report titled "Report on 2014 Drilling Program on the Windfall Hills Property".
5. As of the date of this certificate, to the best of the writer's knowledge, information and belief, this Technical Report contains all scientific and technical information that is required to be disclosed to make the Technical Report not misleading.

Dated 15 of October, 2014

---

James G. Moors, P.Geol.
