## 1.0 INTRODUCTION

The Anita property is located in southern British Columbia in the Similkameen Mining Division (Figure 1), and within the mineral-rich Quesnellia Terrane. This report describes the exploration history, geology, mineralization, exploration activities completed during 2021, and conclusions and recommendation on the Anita property (the “Property”) near Princeton, British Columbia. This report relates to **Event Number 5845391**, recorded on December 7, 2021, with a total value of work of **\$35,958.85**. This was amended on October 10, 2022 to reflect 18 soil and 1 rock samples that were located off the property boundary, with **an amended value of work of \$34,856.94 with \$34,851.06 submitted.**

The Anita property was acquired by Bullet Exploration Inc. (“Bullet), from Independence Gold Corp (“IGO”) on May 28, 2021, and is held on behalf of Bullet in the name of the author, Robert Weicker. Bullet has offices at Bay 6 Suite 200, Calgary, Alberta T2E 7C3. A copy of the Bill of Sale from IGO to Robert Weicker, dated December 13, 2021, is included in Appendix C.

The property is being explored with the purpose of assessing potential for copper, gold and / or molybdenum deposits based on historic mineral showings and past operators work in the area. The 2021 program consisted of prospecting, surface sampling of rock outcrops, and soil geochemistry over primarily Triassic Nicola Group volcanics with inliers of later intrusives. Sulphide mineralization was encountered in quartz veins within both groups, or as disseminations through the country rock.

The site was visited by personnel of Exploration Facilitation Unlimited Inc. between July 1st to 6th 2021 and was visited by the author on July 11, 2021, who was commissioned by Bullet to complete this report.

Unless otherwise indicated, all coordinates are referenced to the North American Datum (NAD) 1983, Universal Transverse Mercator (UTM) Zone 10 coordinate system. All dollar amounts referred to in this report are in Canadian currency.

## 2.0 PROPERTY DESCRIPTION AND LOCATION

The Anita property is located adjacent to Highway 5A, 30 kilometers north of Princeton and 45 kilometers south of Merritt, within the Similkameen Mining Division. The property is centered on 49° 41' 35" N, 120° 35' 6" E. The NTS reference is 92H/068.

The Property consists of six claims totalling 2,841.23 hectares (ha). The Anita claims were originally acquired by SGDS Hive Geological Consultants using British Columbia's Mineral Titles Online ("MTO") system and then 100% transferred by online Bill of Sale to Independence Gold Corp. immediately thereafter.

On May 28<sup>th</sup>, 2021, Bullet Exploration Inc. ("Bullet") entered into an arm's-length definitive agreement with Independence Gold Corp. ("IGO") to acquire a 100% interest in the Anita property (less a 2 percent net smelter royalty ("NSR") retained by IGO. The terms of the agreement required Bullet to make a cash payment of \$30,000 (PAID) and the issuance of 300,000 common shares (PAID) of the corporation. Bullet also has the right to purchase 1 per cent of the NSR at any time in consideration for a cash payment of \$250,000.

Tenure Number	Claim Name	Owner	Issue Date	Good to Date	Area (ha)
1069887	Anita 1	100% Robert Weicker	26 <sup>th</sup> July 2019	1 <sup>st</sup> May 2023	521.99

**TABLE 1 – TENURE STATUS**

*NOTE:* The claims comprising the Anita Property are in good standing as of the date of this report.

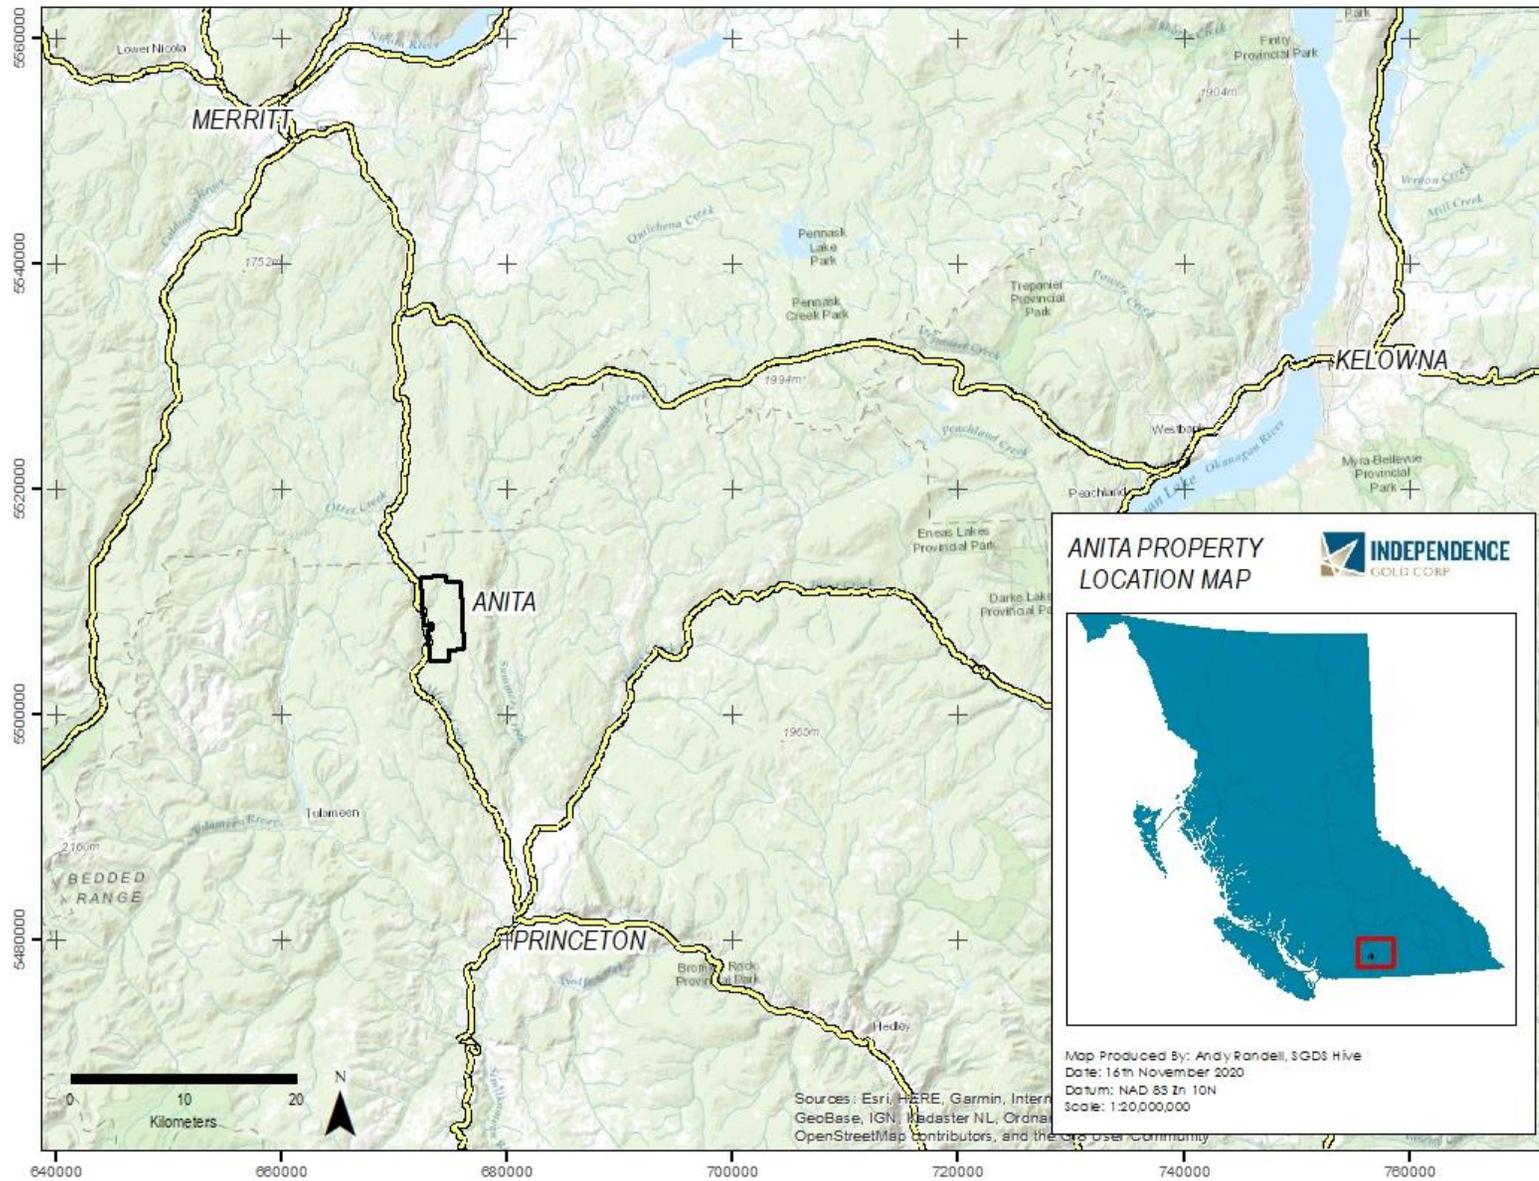

Figure 1: Location of Anita Property north of Princeton, British Columbia

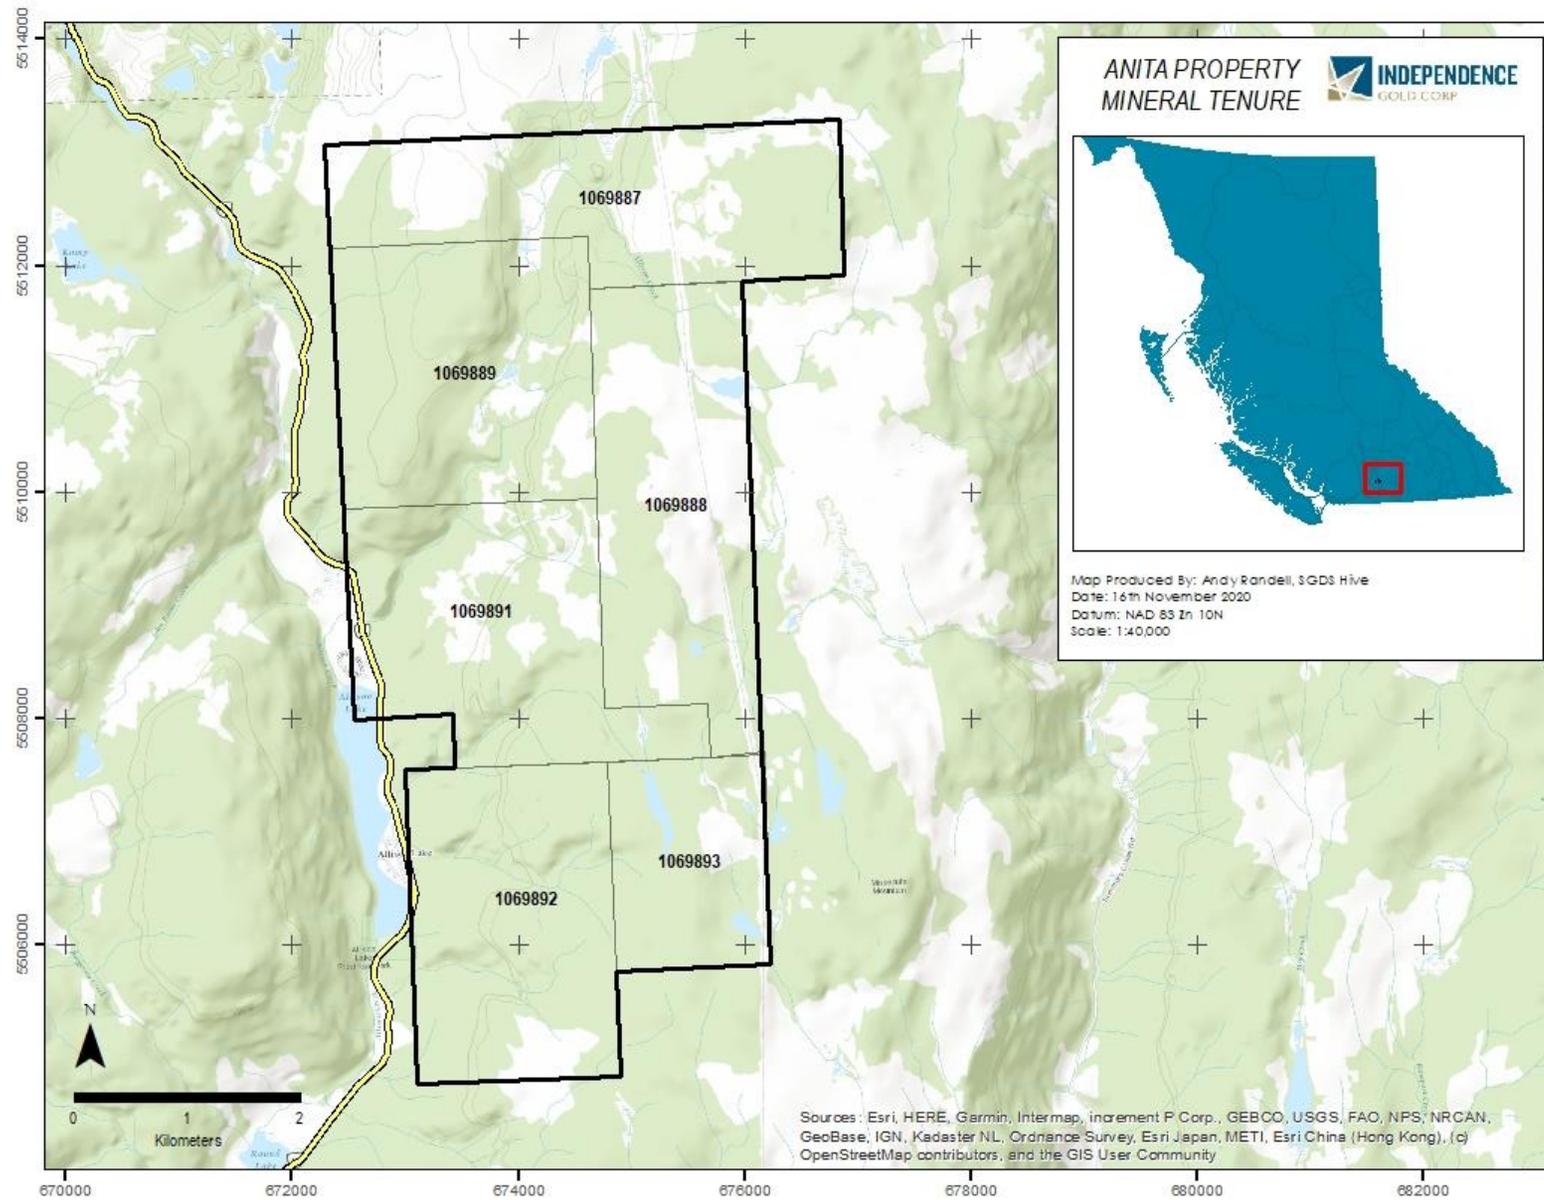

Figure 2: Anita Tenure

### **3.0 ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY**

#### **3.1 Accessibility**

Access to the property is via three unnamed forestry service roads from Highway 5A on the eastern side of Allison Lake. These roads do not cover all the claims but provide access up the steep lakeside embankment onto a flatter terrain which can be traversed on foot. The eastern shore of Allison Lake contains power lines and several holiday residential lots, and a provincial camp site at the southern end of the lake. Elevation on the property ranges from 1200 meters at Allison Lake to 1569 meters on the Anita 6 claims.

#### **3.2 Climate**

The climate of this part of the province is typical of the southern interior of British Columbia. The summer field season from mid to late April to late October is generally warm and dry, with daily high temperatures ranging from +20° to +30°C. Winters are cold with significant snow accumulations. Temperatures can drop to -20°C for extended periods.

#### **3.3 Local Resources & Infrastructure**

The logistics of working in this part of the province are excellent, with Highway access right to the property. Heavy equipment is available locally in Princeton or Merritt, as are supplies, fuel and lodging.

Unskilled labour is available locally. Princeton, Merritt, and Kamloops are industrial centres with a skilled workforce currently employed at several large mines throughout the region. Depending on the type of exploration program to be conducted, the field season generally extends from late April to early November. A high-tension power line crosses the west side of the property.

#### **3.4 Physiography**

The topography is typical of this part of the Thompson Plateau, reflecting the effects of a predominantly northerly structural trend, accentuated by glaciation; heavily forested, relatively gentle upland slopes are cut by deep, steep-sided, north trending valleys. Bedrock exposure varies and is largely a function of glacial action; generally, outcrop is abundant on ridges and along the

upper slopes of steep valleys, but lower slopes and valley bottoms bear a thick mantle of glacial overburden.

Away from the main north-south river valleys, drainage is weakly developed and consists of ill-defined water courses and seepages.

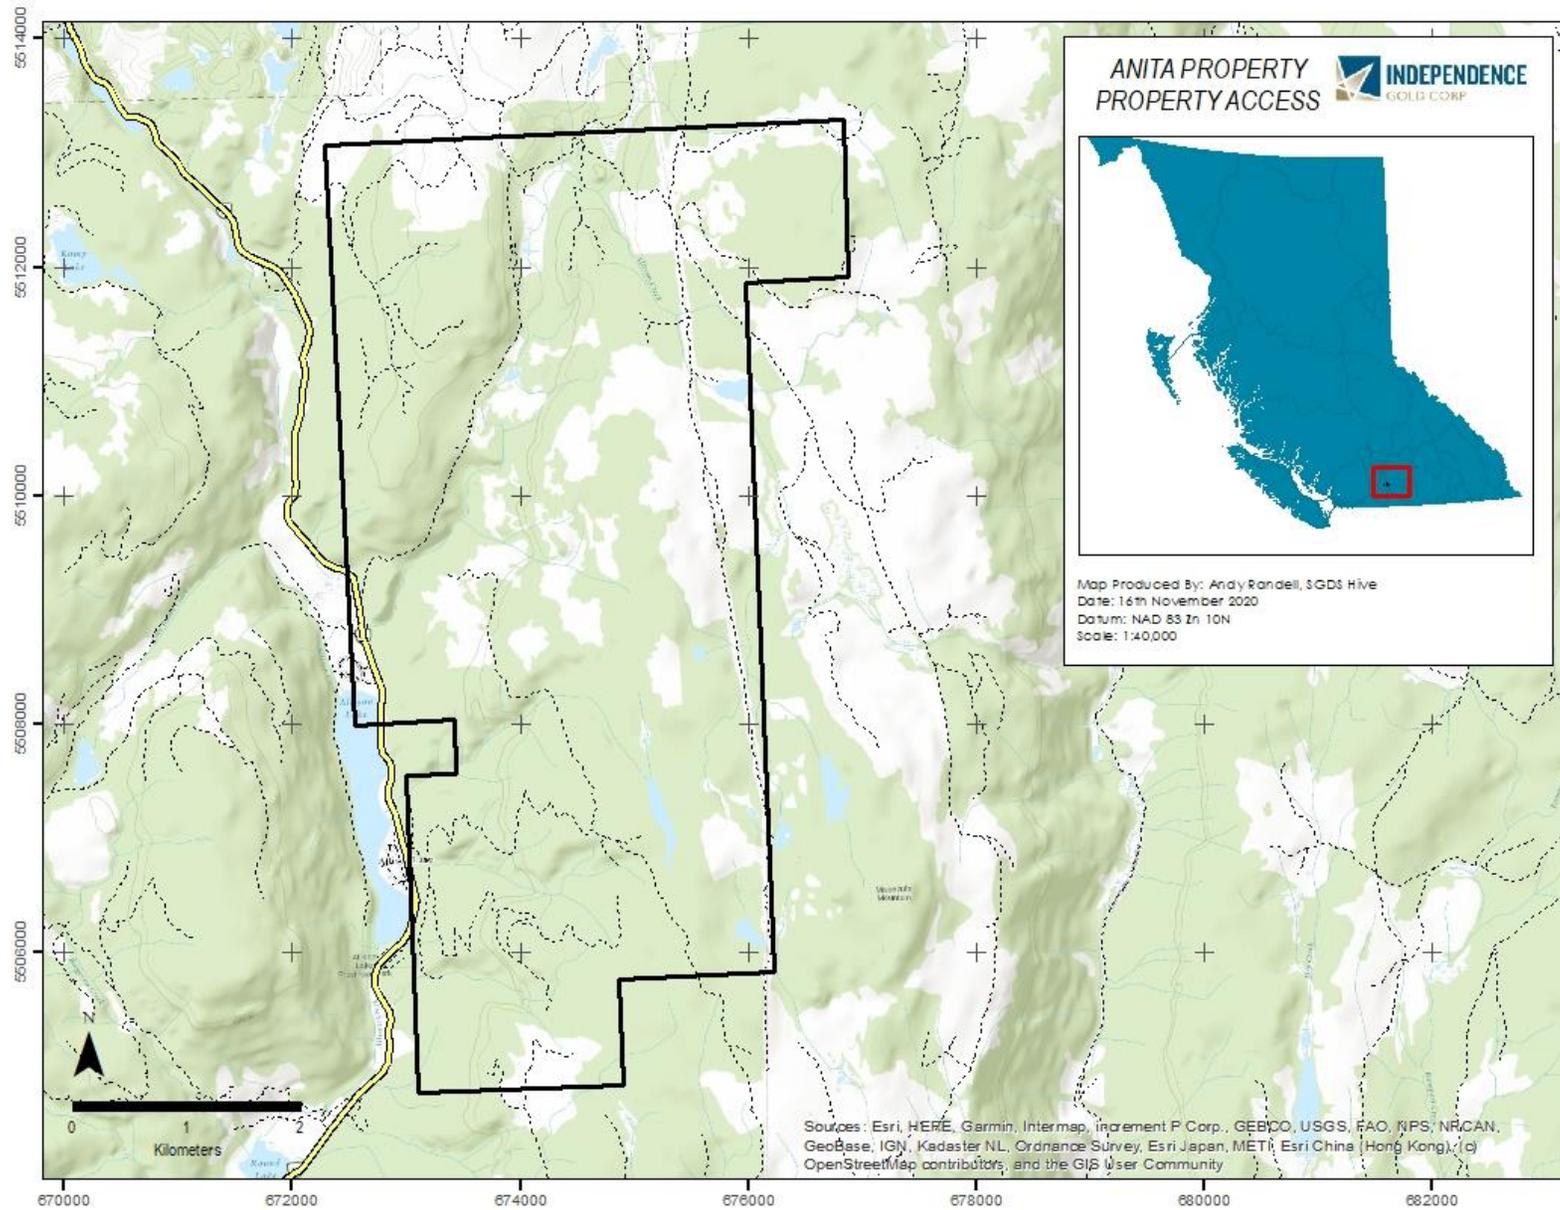

Figure 3: Property Access and Forestry Service Roads

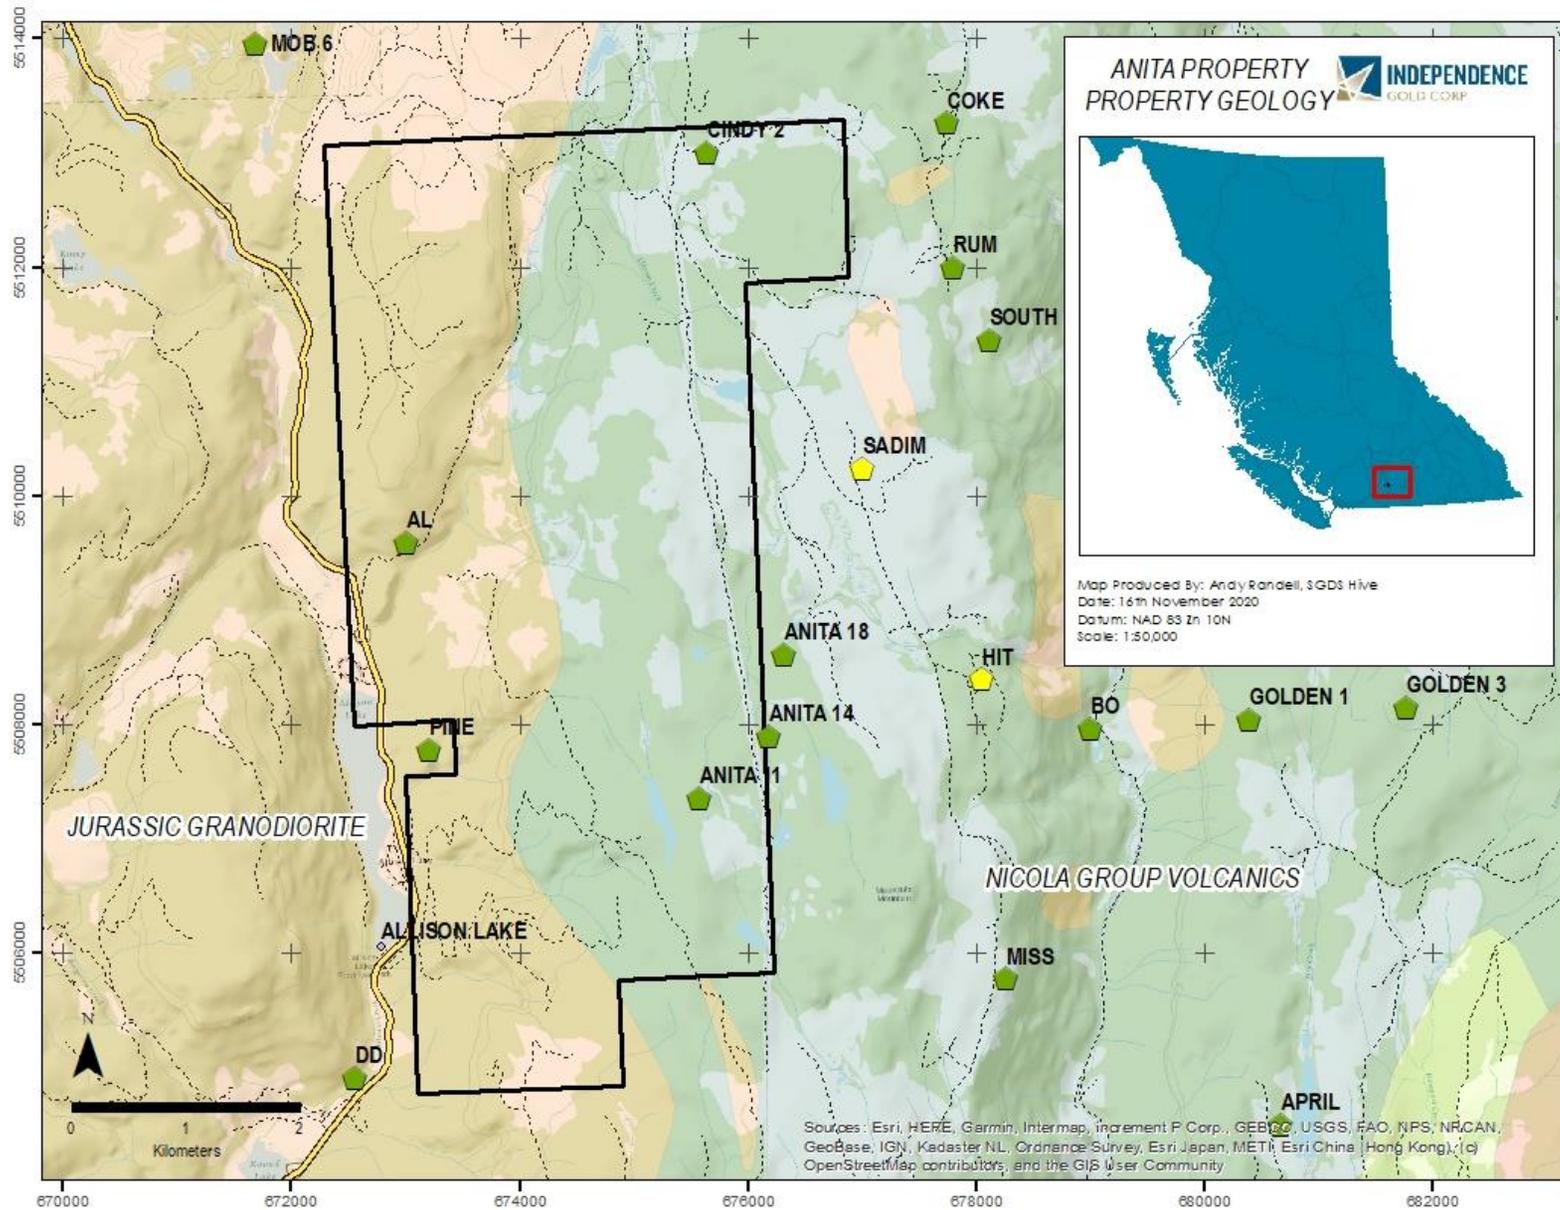

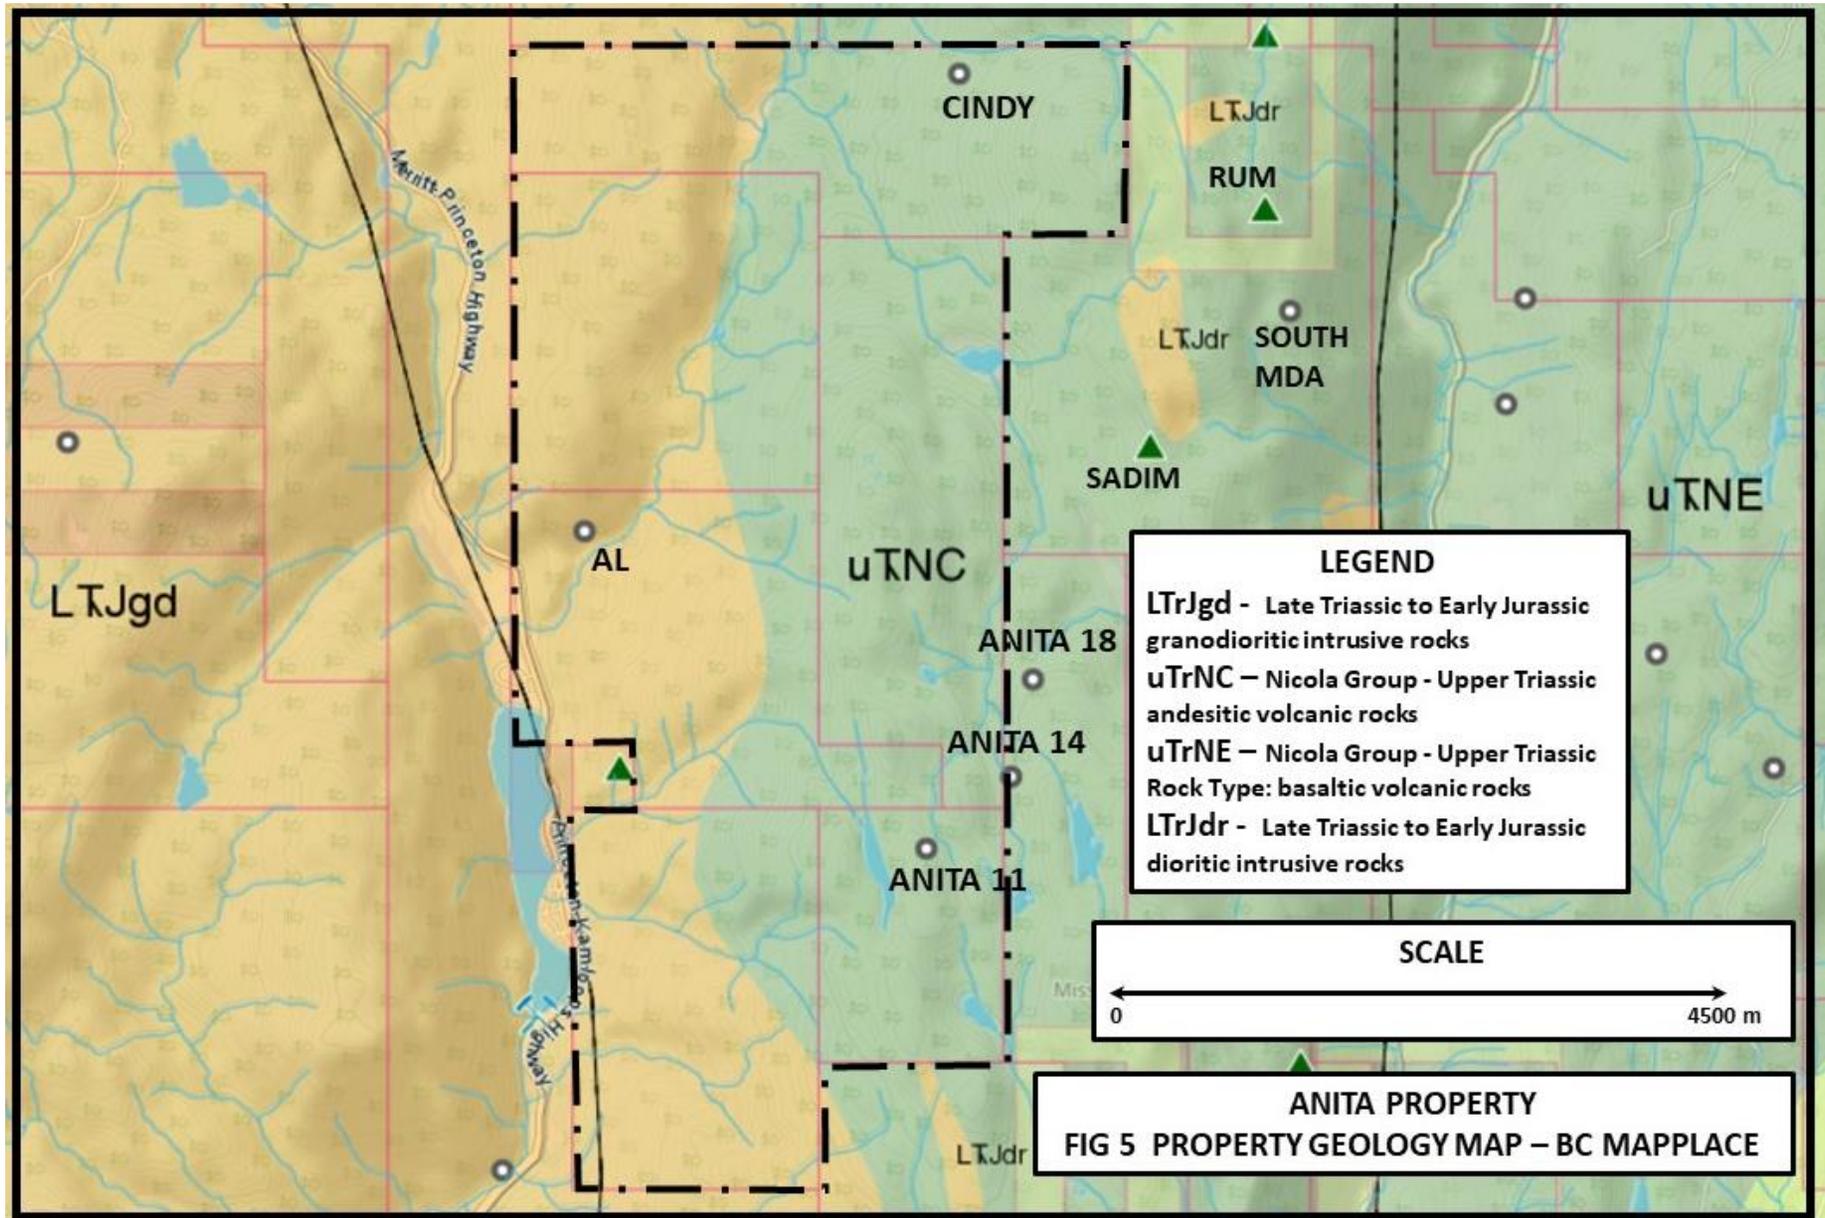

Figure 4: Regional Geology and Mineral Showings (Green = Copper, Yellow = Gold)

## 4.0 HISTORY

The property covers three historic mineral showings: Cindy (MinFile 092HNE037), AI (MinFile 092HNE121) and Anita 11 (MinFile 092HNE139), all of which are classified as either “copper-molybdenum porphyry” or “copper volcanic red bed” occurrences.

The most recent work on the current Anita claim group comprised four days of exploration activities (prospecting, rock sampling, geological mapping) by Independence Gold Corp. (IGO), in August 2019. A total of 18 rock samples were collected from across the property, including three samples located just off the property. Three samples were recognized as locally originated float, with the rest obtained from outcrops or roadcuts locations.

Historic work in the area is first recorded in 1972, with work occurring sporadically through the 1980’s by a variety of vendors. Assessment filings for each mineral showing provide the following work history:

### 4.1 Cindy

The area of the Cindy 2 Showing (Minfile #092HNE037) was first staked and recognized in 1972 when owned and prospected by Mr. J. Butterworth. The name seems to be based on the “Cindy” claim group that was staked in 1973 over the area by Bronson Mines Ltd. When the western part of AMAX’s Rum claims lapsed. Bronson Mines Ltd. undertook additional systematic prospecting, first in pits dug to house BC Hydro power poles (which recorded only glacial cover), and then via a series of grid lines. Abundant pyrite was noted in any outcrop, with sparse chalcopyrite. In 1974, Bronson Mines completed 12-line miles of magnetic survey work across the area around the Cindy Showing (currently around the Anita 1 & 2 claims). There are no reported assays values in three historic assessment reports (#4465, #5044 and #5114) related to the Cindy showing. In 1977, Bronson Mines Limited let the Cindy claim group lapse.

The location of the Cindy showing was also cover in Assessment Report # 31916, by Orofino Minerals Inc., dated December 31, 2010; *“A third north-northwest trending narrow zone of weak copper anomalies is poorly defined to the south of the Cindy 2 Minfile occurrence. No copper was observed in the area during this program, but the occurrence is described as pyrite, chalcopyrite and traces of chalcocite hosted in volcanic rocks. The habit of the mineralization is not described.”*

IGO did not visit the location of the Cindy showing in 2019.

## 4.2 AI

The AI Showing (Minfile #092HNE121) is located approximately 1.3 kilometers northeast of the north end of Allison Lake in a roadcut exposure with shear zones. The AI showing was first recognised through prospecting by R. Poloni in 1972. In 1980, Territorial Petroleum Ventures Ltd. Completed a 239-sample soil grid along lines spaced 50 meters, 75 meters or 100 meters apart. They identified several isolated copper anomalies, with the highest return of 540 parts per million copper in a soil sample. Territorial Petroleum returned to the site in 1984 to complete additional soil survey work but this was unsuccessful in identifying any additional anomalies. The AI showing and historic work largely occupies the current Anita 4 claim area.

IGO's obtained six (6) rock samples from the general area of the AI Showing and three additional samples just west of the claim boundary (less than 200 meters) and their best values was obtained from sample X981966, returning 246 parts per million ("ppm" copper.

## 4.3 Anita 11

The Anita 11 showing (Minfile #092HNE139) is located approximately 280 metres northeast of Stringer Lake and 1.9 kilometres west-northwest of the summit of Missezula Mountain. The Anita 11 showing was first noted in 1973 when Mr. J. Butterworth staked and prospected the property, noting large areas of alteration within volcanic materials with widespread pyrite and stringers of chalcopyrite. The claims passed to Bronson Mines Ltd. in 1974 who continued prospecting on the claims as part of a regional plan. The claims are mentioned again in a 1988 report by I.M Watson and Associates Ltd. for Laramide Resources who completed geochemical sampling, magnetic surveys, mapping, trenching and diamond drilling on the easterly-adjacent Sadim claims. Their area of interest overlaps the modern Anita 5 & 6 claims. This program was successful in identifying gold and copper mineralization, with grades up to 19,800 parts per billion gold in trenches just to the east of the modern Anita 6 (tenure 1069893) claim boundary, near the Anita 14 showing which is close to the property boundary.

IGO's obtained four (4) rock samples approximately 150 to 200 meters south of the plotted location of the Anita 11 showing in August 2019. IGO's best gold values was obtained from sample X981741, returning 37 parts per billion ("ppb") gold from a rhyolite outcrop with 5% disseminated pyrite and possible arsenopyrite.

## 5.0 GEOLOGICAL SETTING AND MINERALIZATION

### 5.1 Regional Geology

The Upper Triassic Nicola Group rocks extend from the 49th parallel north to Kamloops Lake and continue north beneath Tertiary cover to emerge in the Quesnel area as the Quesnel Belt (Preto, 1979). The volcanics of the Quesnel and Nicola Belts form a mixed alkaline and calc-alkaline sequence of basalts and derived breccias, tuffs, and minor sediments.

The volcanic rocks are intruded by comagmatic alkaline plutons, ranging in composition from syenogabbro to alkali syenite. The intrusions appear to be structural related and occur in belts along major lineaments and faults. They vary in size from plugs to small batholiths and have been emplaced into the volcanic centres which produced the abundance of volcanic material (Barr et al, 1976).

In the Allison Lake-Missezula area, Preto has delineated three assemblages – a Western Belt of easterly dipping calc-alkaline flows, pyroclastics and sediments; a Central Belt of alkaline and calc-alkaline volcanics and intrusions, and minor sediments; and an Eastern Belt of westerly dipping volcanic sediments, tuffs and alkaline flows associated with small monzonite porphyry stocks. The belts are separated by major north-striking faults.

Preto believes that the Central Belt of dominantly volcanic rocks originates from eruptive centres along the major fault system and points out the greater concentrations of mineral deposits along this belt.

### 5.2 Property Geology

The property lies west of the Summers Creek Fault, which marks the eastern boundary of Preto's Central Belt.

The property is underlain by northerly striking intermediate to basic flows, green monolithic and polyolithic volcanic breccias, tuffs, and less abundant argillites and limestones. These rocks have been intruded by irregular bodies of gabbroic to dioritic composition. Volcanics and sediments marginal to the intrusions have been variably propylitised (epidote-pyrite-chlorite-carbonate) and locally host erratically distributed copper-pyrite zones.

## 6.0 DEPOSIT TYPES

Although the Anita property is at an earlier stage of exploration than properties located further to the east, the geological setting is interpreted to be similar to those of several large porphyry copper deposits in the region, such as Copper Mountain, Afton, and Highland Valley. Prospects located just east of the Anita property include the Rum, Coke and Sadim occurrences. Mineralization on these targets includes volcanic and intrusion hosted porphyry-type copper at the Rum and Coke prospects, and high-grade gold-bearing quartz veins at the Sadim prospect. Both have been the focus of several trenching and drilling programs in the past.

While the full nature of the anomalies at the Anita Property are only partially defined and not well understood, it is thought that the anomalies relate to intrusive plugs which form localised copper porphyries which are then overprinted by shear zones with later gold formation along brecciated zones.

## 7.0 EXPLORATION

The 2021 exploration program included rock geochemistry and prospecting over most of the property, and a soil geochemistry sampling program over the northern portion. The program had several objectives:

- Known Minfile occurrences on the property had been visited by several other companies with little success of identifying these historic showings. An effort was made to locate and sample all three Minfile showings on the Anita property.
- Prospecting was completed to discover new zones of mineralization associated with ongoing logging activities in the area and road construction related to ranching,
- A soil geochemistry grid was proposed over the northern portion of the property in the vicinity of the Cindy Showing. While the Cindy Showing has never definitely been re-discovered, approximately 1.2 east of the Anita property boundary the Sadim prospect has had extensive historic exploration work consisting of mapping, cat trenching, rock sampling and drilling. Watson (1987, 1988) commented that the Sadim area was underlain by a north-northwest striking and shallow east-northeast dipping thrust fault up to 15m thick consisting of quartz rich gouge. Soil geochemistry by Orofino Minerals Inc., in 2010 returned strong copper and gold soil geochemistry anomalies trending north-northwest, with several sample location currently on the

Anita property. In addition, Orofino identified a north-northwest trending lineament apparent on the 2009 airborne radiometric and 2010 IP surveys and indicated; “This structure is oblique to stratigraphy as well as the quartz veins.”

Over a period of 6 days (July 1-6, 2021), a four-man crew completed prospecting work, obtained 25 rock samples (1 located off the property), and collected 265 soil samples (18 located off the property). The author made a site visit to the property on July 11, 2021. The primary lithologies encountered during sampling were andesites, tuffs and rhyolites, with the occasional granitic plug and metamorphosed argillite. The rock and soil geochemistry results are discussed under the Interpretation and Conclusions section of this report.

## 8.0 DRILLING

No drilling took place on the Anita property in 2021. To the best of the author’s knowledge there has been no modern drilling completed on the Anita property.

## 9.0 SAMPLE PREPARATION, ANALYSES AND SECURITY

The 2021 rock samples were collected using a hammer from outcrops, talus, or boulders. Samples were placed in a poly ore bag with a sample tag marked with unique sample number also placed inside each sample bag and sealed with a cable tie. The site position was recorded using a handheld GPS receiver in UTM NAD83 Zone 10 format. Once taken, the samples were kept in a secure location while the program was still underway.

Soil samples were collected at a regional scale at 100-meter intervals along E-W lines that were spaced 250 meter apart in the northern portion of the Anita Property. Soil samples were collected using a soil auger. Samples were laid out on a plastic bag and hand sifted to remove rocks, roots, and other organics before being classified, described, and put into a labelled Kraft sample bag. Location for each sample was recorded in a notebook as well as on a Garmin GPS. Description was recorded in a notebook and a ribbon marked with sample number, date, and sampler initials was tied to mark the location. Samples were stored in a locked motel room and were retrieved by the author who hand-delivered to ALS Canada Ltd. facility in North Vancouver.

Due to the reconnaissance nature of the 2021 exploration program, no standards or blanks were included into the sample stream. However, if a larger, follow-up sampling program is completed, it is

recommended that prepackaged standards purchased from OREAS and sample blanks made of dolomite purchased at a hardware store be inserted into the sample sets for QAQC procedures.

The 2021 rock and soil samples from the Anita Property were bagged in fiberglass sacks, with a unique security label and hand delivered to ALS Global - Geochemistry Analytical Lab in North Vancouver, BC, Canada (a division of ALS Canada Ltd.) for analysis. ALS Global - Geochemistry Analytical Lab is an International Standards Organization (ISO) 9001 Geochemical and assaying laboratory.

At ALS rock samples were dried and crushed to >70% passing a 2mm sieve with 250 g separated by rotary splitter. This split was pulverized until >85% passed a 75 micron sieve. From this a 25g final sample was split off and analyzed by ALS Lab's **AuME-TL43** process procedure. Au + multi-element packages use a single aqua regia digest on 25g charge weights, with Trace detection options. Gold, in conjunction with a large suite of base metal and pathfinder elements, are determined from the same solution via a combination of ICPMS ("Inductively Coupled Plasma Mass spectrometry") and ICP-AES.

Soil samples were also dried and were sieved to 180 microns. The remaining material had a 25 g aliquot split off and were also analyzed by ALS Lab's AuME-TL43 process procedure

### 10.0 ENVIRONMENTAL STUDIES, PERMITTING AND SOCIAL OR COMMUNITY IMPACT

No environmental studies nor community engagements were completed during 2021 give the modest budget and early stage of exploration activity on the Anita property.

## 11.0 INTERPRETATION AND CONCLUSIONS

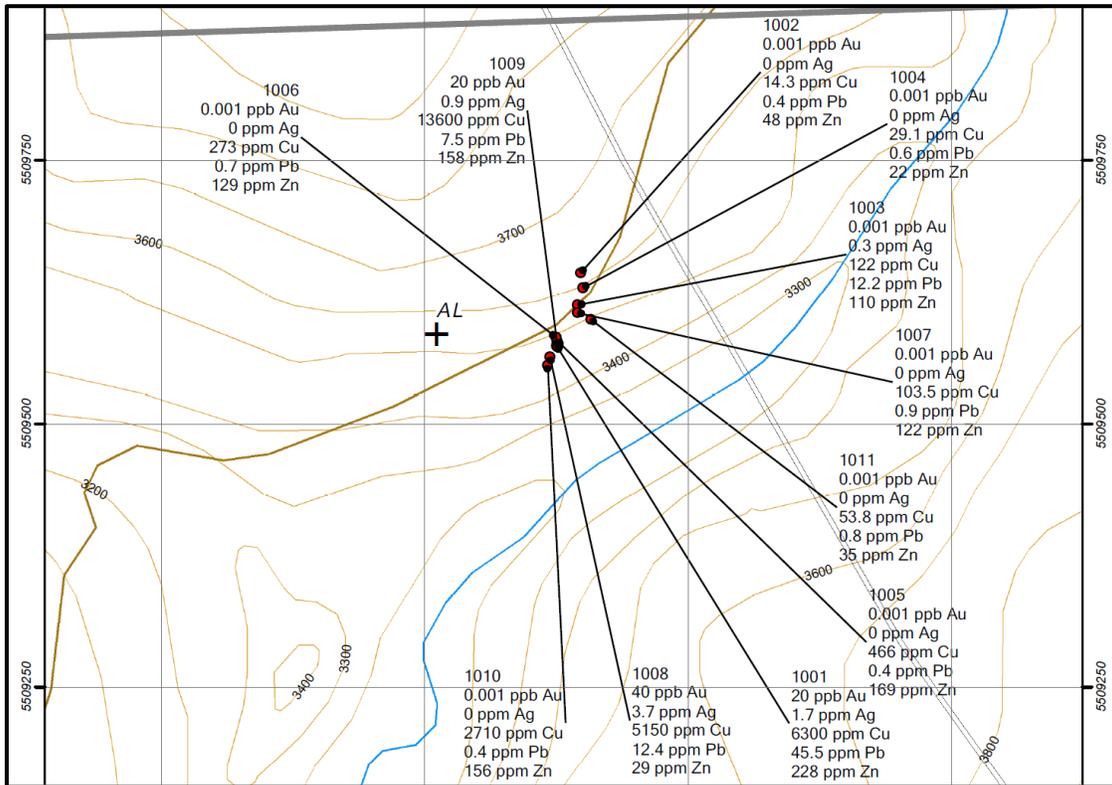

Although the exploration activities on the Anita property in 2021 were modest in scope and cost, several significant results were obtained and include:

- Confirmation of the “Sadim” mineralized trend – Soil geochemistry results (Fig 6, 6a, 6b, 6c) are presented below, and a strong north-northwest trend of copper (and to a lesser extent gold) trending from the Sadim prospect (Orofino Minerals, coincident trend indicated by soil geochemistry, structural interpretation and radiometric and IP geophysics) is confirmed by our copper-in-soil anomalies (Fig 6a) and is evident in the contouring of the copper values (Fig 6 b).
- Cindy Showing was not confirmed – Only three rock samples were taken in the vicinity of the Cindy Showing and the best copper values returned 101 ppm Cu. Rock samples locations and results are presented below (Fig 7, 7a, 7b, and 7 c). Soil sampling in the vicinity of the Cindy

Showing had only one anomalous sample of 74 ppm Cu. It is likely that the Cindy Showing may be an unreliable historic reference. The best gold value in a rock sample from the Anita property of 170 ppb Au was returned close to the north border from a gossan float sample with minor chalcopyrite (note Cu 74 ppm). A soil sample close by was very anomalous, returning 133 ppm Cu.

- Al Showing Confirmed – Rock sampling in the vicinity of the AL Minfile showing returned strong copper values and **represent the best values ever returned from the Anita property**. Referring

to Fig 7b, Table 2, and the inset map above indicates four (4) of 11 rock samples returned significant copper values with a peak value of 1.36% Cu (13,600 ppm Cu). Gold values are typically very low (0.001 ppb Au indicates below detection) and silver, and zinc are only rarely weakly anomalous.

**TABLE 2: DESCRIPTION OF ROCK SAMPLES TAKEN ON THE ANITA PROPERTY – SUMMER 2021**

- Soil Geochemistry – a total of 265 soil samples were taken during July 2021 and this reflects a fair limited sample data base for threshold parameters. **This report has been amended to reflect that 18 soil samples and one (1) rock sample were taken outside of (north of) the property boundaries, and these samples have been deducted from the work value.** The table below indicates the values for several metals at various percentiles. Using the 90% percentile, would indicate an anomaly threshold of 42 ppm for copper, which is typical for most areas of BC, but is a bit lower than neighboring properties. As an example, Orofino 2010 on the Sadim property east of the

	Au ppb	Ag ppm	Cu ppm	Pb ppm	Zn ppm	As ppm	Mo ppm
Percentile 85%	2	0.14	32.5	5.5	90.0	3.5	0.82
Percentile 90%	3	0.17	42.1	6.4	106.0	3.9	0.98
Percentile 95%	4	0.21	66.8	8.1	136.8	4.7	1.22
Percentile 97%	7	0.26	80.7	11.8	174.1	6.6	1.42

Anita property, with a data base of 755 samples, indicated weakly anomalous threshold of 51 to 100 ppm Cu, and strongly anomalous at 100 to 200 ppm Cu. Kodiak Copper located to the northeast on the MPD property also reports strongly anomalous copper-in-soil values of 100 to 200 ppm. Given the fairly wide line spacing and sample intervals, with several values of 75 to +100 ppm Cu are valid copper-in-soil anomalies that warrant additional follow-up. Gold and silver thresholds are very low and the rare gold-in-soil anomaly (even a single point sample) should be investigated with additional samples.

## 12.0 RECOMMENDATIONS

It is the author’s opinion that, while still at a very early stage of exploration, the Anita property is a property of merit and warrants additional exploration activities. The 2021 program was limited in time and modest in budget but returned encouraging results. Future work at the Anita property include:

- “Sadim Trend” - Additional soil sampling, geological mapping, and rock sampling on the north part of the Anita property to better define the NNW trending Sadim Trend. Infill soil sampling is recommended, along with a review of the assessment data on the Sadim Prospect. Outcrop exposure may be fairly limited in this area and soil sampling may be required to refine the trends. Additional prospecting and sampling in the vicinity of the sample that returned 170 ppb Au near the northern boundary should also be completed.
- Geophysics – Ground magnetics would be useful, but care must be exercised due to significant “cultural” effects (power lines, water tanks, gas lines, etc. Induced Polarization over the Sadim Trend would also be useful as I suspect the source of the copper-in-soil anomaly may be buried.

- Geological mapping – the government geology map indicates several Late Triassic to Early Jurassic dioritic intrusive stocks just east of the Anita property. Efforts should be made to check if these outcrop or appear as float remnants on the Anita property.
- AI Showing – additional prospecting, geological mapping, and rock sample geochemistry should be completed in the area of the 2021 high copper values. Some test soil lines should be completed to determine if they will be useful. Prospecting with an XRF analyzer may be useful (for copper values).

#### 14.0 STATEMENT OF QUALIFICATION

1. I, Robert F. Weicker of Suite 2801, 1166 Melville St., Vancouver, B.C. V6E 4P5, am a self-employed consultant geologist through my consulting company, Multiple Metals Resources Ltd., and I authored and am responsible for this report entitled " REPORT ON GEOCHEMISTRY AND PROSPECTING ACTIVITIES 2021 ON THE ANITA PROPERTY", dated March 6, 2022.
2. I am a graduate of the University of Waterloo, Waterloo, Ontario with an Honours Bachelor's Degree in Earth Science (1977). I have more than 35 years mineral exploration, development, and production experience, working with major and junior mining companies both domestically and internationally.
3. I have been a registered member of the Association of Professional Engineers and Geologist of British Columbia (APEGBC) in the past, but I am currently retired from APEGBC, and not a member, since 2011.
4. I have visited the subject mineral property of this report.
5. This report is based upon work completed from July 1 to July 6, 2021, and the author's personal knowledge of the region and a review of additional pertinent data.
6. As stated in this report, in my professional opinion the property is of potential merit and further exploration work is justified.
7. To the best of my knowledge this report contains all scientific and technical information required to be disclosed so as not to be misleading.
8. I hold the claims on behalf of Bullet Exploration Inc., but I have no interest in the property and all interests in the property are owned by Bullet Exploration Inc. My professional relationship is as a non-arm's length consultant, and I have no expectation that this relationship will change.
9. I consent to the use of this report by Bullet Exploration Inc., for such assessment and/or regulatory and financing purposes deemed necessary, but if any part shall be taken as an excerpt, it shall be done only with my approval.

Signed, "Robert Weicker", dated at Vancouver, March 6<sup>th</sup>, 2022.

**Effective Date:** 2021/DEC/13

**Seller:** INDEPENDENCE GOLD CORP. ([262049](#))

**Buyer:** WEICKER, ROBERT FREDERICK ([128515](#))

**Title Number:** [1069887](#), 521.9915 hectares

**Type:** Mineral Claim

**Claim Name:** ANITA1

**Good To Date:** 2023/MAY/01

**Percent of title purchased:** 100%

**Client:** WEICKER, ROBERT FREDERICK ([128515](#)) now owns 100% of this tenure.

**Title Number:** [1069888](#), 522.2489 hectares

**Type:** Mineral Claim

**Claim Name:** ANITA2

**Good To Date:** 2023/MAY/01

**Percent of title purchased:** 100%

**Client:** WEICKER, ROBERT FREDERICK ([128515](#)) now owns 100% of this tenure.

**Title Number:** [1069889](#), 522.1339 hectares

**Type:** Mineral Claim

**Claim Name:** ANITA3

**Good To Date:** 2023/MAY/01

**Percent of title purchased:** 100%

**Client:** WEICKER, ROBERT FREDERICK ([128515](#)) now owns 100% of this tenure.

**Title Number:** [1069891](#), 522.3538 hectares

**Type:** Mineral Claim

**Claim Name:** ANITA4

**Good To Date:** 2023/MAY/01

**Percent of title purchased:** 100%

**Client:** WEICKER, ROBERT FREDERICK ([128515](#)) now owns 100% of this tenure.

**Title Number:** [1069892](#), 501.6918 hectares

**Type:** Mineral Claim

**Claim Name:** ANITA5

**Good To Date:** 2023/MAY/01

**Percent of title purchased:** 100%

**Client:** WEICKER, ROBERT FREDERICK ([128515](#)) now owns 100% of this tenure.

**Title Number:** [1069893](#), 250.8232 hectares

**Type:** Mineral Claim

**Claim Name:** ANITA6

**Good To Date:** 2023/MAY/01

**Percent of title purchased:** 100%

**Client:** WEICKER, ROBERT FREDERICK ([128515](#)) now owns 100% of this tenure.

NOTE: Any subsequent decisions regarding mining activity and permits authorizing exploration and development work on mineral or placer titles requires the Province of British Columbia to consult with and possibly accommodate First Nations who may be impacted by any such authorizations.

NOTE: The registration of this completed transfer of ownership in Mineral Titles Online only affects the official record of title ownership. If you arranged with the seller to have an existing active work permit or reclamation bond on this/these title(s) transferred to you then you still need to contact the regional permitting office to update applicable permit or bond

**CERTIFICATE VA21181757**

Project: ANITA PROJECT

This report is for 25 samples of Rock submitted to our lab in Vancouver, BC, Canada on 14-JUL-2021.

The following have access to data associated with this certificate:

ROBERT WEICKER		
----------------	--	--

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
CRU-QC	Crushing QC Test
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
CRU-21	Crush entire sample

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	
ME-MS41	Ultra Trace Aqua Regia ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

**CERTIFICATE OF ANALYSIS VA21181757**

**CERTIFICATE COMMENTS**

**ANALYTICAL COMMENTS**

Applies to Method: Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).  
 ME-MS41

**LABORATORY ADDRESSES**

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

CRU-21	CRU-31	CRU-QC	Cu-OG46
LOG-22	ME-MS41	ME-OG46	PUL-31

Project: ANITA PROJECT

This report is for 265 samples of Soil submitted to our lab in Vancouver, BC, Canada on 14-JUL-2021.

The following have access to data associated with this certificate:

ROBERT WEICKER		
----------------	--	--

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both
DISP-01	Disposal of all sample fractions

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
AuME-TL43	25g Trace Au + Multi Element PKG	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.
